PT   Polypeptide(s) comprising immunogenic part of Leishmania antigen -
PT   useful for leishmaniasis vaccination and diagnosis
XX
PS   Example 4; Page 64-67; 106pp; English.
XX
CC   A genomic DNA molecule (AAT62138) encodes a 210 kDa immunogenic
CC   Leishmania tropica antigen (AAW11217), designated Lt-210.  It was
CC   obtd. by screening a L. tropica promastigote expression library
CC   with sera isolated from viscerotropic leishmaniasis patients.  DNA
CC   molecules (see also AAT62135-37, AAT62139) encoding Leishmania antigens
CC   can be incorporated into vectors and used to produce recombinant
CC   antigens, or immunogenic portions of them, in host cells for use in
CC   vaccines against Leishmaniasis, or may themselves be used as
CC   vaccines for in vivo immunogen generation.

CC This sequence encodes a Leishmania antigen (LAg) of the invention,
CC designated Lt-210. Compositions and vaccines containing the protein are
CC used to generate a protective or therapeutic immune response against the
CC Leishmania species donavani, chagasi, infantum, major, amazonensis,
CC braziliensis, panamensis, tropica or guayanensis. They can also be used
CC to detect infection (in a skin test). The compositions induce a humoral
CC and/or cellular response, specifically of Th1 type, particularly
CC including induction of interleukin-12 (IL-12) production. They may thus
CC be used more generally to treat any condition (e.g. bacterial, viral or
CC protozoal infection, or cancer) which responds to IL-12.

PT   Lt210 polypeptide useful for diagnosis and prevention of Leishmania
PT   infections -
XX
PS   Example 1; Fig 1A; 29pp; English.
XX
CC   The present sequence encodes Leishmania tropica Lt210 protein. The Lt210
CC   amino acid repeat sequence has the following 33 amino acid sequence:
CC   Gln-Ala-Arg-Xaa-Gln-Ala-Leu-Glu-Glu-Ala-Ala-Arg-Leu-Xbb-Ala-Glu-Leu-Glu-
CC   Xcc-Xcc-Glu-Glu-Ala-Ala-Arg-Leu-Xdd-Xee-Met-His-Xcc-Xff-Glu (II)
CC   Xaa = Val or Ser; Xbb = Arg or Cys; Xcc = Ala or Glu; Xdd = Asp or Glu;
CC   Xee = Val or Ala; and Xff = Ala or Gly. Proteins comprising at least one
CC   copy of the repeat sequence are useful for the diagnosis of Leishmania
CC   infections in patients and in blood supplies. The diagnosis is carried
CC   out by immunogenic assay e.g. ELISA using sera or antibodies from a
CC   patient or experimental animal or delayed-type hypersensitivity (DTH)
CC   reaction. This detection can be used to evaluate a patients capability to
CC   generate an immune response to Leishmania. These proteins can also be
CC   used as vaccines and in compositions to protect against Leishmania
CC   infections.

PT   New polypeptide containing at least an immunogenic portion of one or
PT   more Leishmania antigens or their variants, useful for preventing,
PT   treating and detecting leishmaniasis, and stimulating immune responses
PT   in patients  -
XX
```

```
PS   Example 4; Page 34-35; 163pp; English.
XX
CC   This invention describes a novel polypeptide containing an immunogenic
CC   portion of a Leishmania antigen or its variant which has antiparasitic
CC   and immunostimulant activity. The compositions and methods of the present
CC   invention are useful for preventing, treating and detecting
CC   leishmaniasis, and stimulating immune responses in patients against
CC   leishmaniasis. The polypeptides and the polynucleotides encoding them can
CC   be used for gene therapy, in vaccines or as interleukin-12 agonists. The
CC   compositions and methods of the present invention, as compared to prior
CC   art, are more improved therapeutic modalities in the diagnosis,
CC   prevention and treatment of leishmaniasis.

PT   New polypeptide comprising immunogenic part of Leishmania antigen,
PT   useful for treatment, prevention and diagnosis of leishmaniasis -
XX
PS   Example 4; Column 59-63; 111pp; English.
XX
CC   The present invention relates to novel proteins comprising immunogenic
CC   part of Leishmania antigen. Compositions containing sequences of the
CC   invention and other Leishmania antigen related polypeptides are useful
CC   for preventing, treating and detecting (in delayed-type hypersensitivity
CC   skin tests) leishmaniasis. They can also be used to treat any diseases
CC   responsive to interleukin-12 stimulation, including bacterial, viral and
CC   protozoal infections and cancer. Sequences of the invention are useful
CC   as vaccines. The present sequence is a DNA encoding L. tropica Lt-1
CC   (Lt-210) antigenic protein.

PT Stimulating immune responses in a patient for preventing or treating
PT Leishmaniasis, by administering a vaccine comprising a polypeptide
PT comprising an immunogenic portion or epitope of Leishmania antigen -
XX
PS Example 4; Column 61-66; 114pp; English.
XX
CC The invention relates to a method for stimulating an immune response in a
CC patient comprising administering to the patient a vaccine containing a
CC non-specific immune response enhancer and a polypeptide having an
CC immunogenic portion of a Leishmania antigen, or a polypeptide having two
CC contiguous epitopes of a Leishmania antigen. The method is useful for
CC stimulating an immune response, in particular a Th1 response or
CC interleukin-12 (IL-12) production in a patient, for preventing and
CC treating Leishmaniasis. This sequence represents DNA encoding a
CC Leishmania antigenic polypeptide of the invention.

XX
CC   The invention relates to polypeptides comprising an immunogenic part of a
CC   Leishmania antigen. The Leishmania polypeptides and their associated DNA
CC   sequences, epitopes and fusion proteins are used in the production of
CC   compositions used for inducing a protective immune response against
CC   leishmaniasis, for prevention and treatment of the disease. The
CC   compositions can also be used generally to treat diseases that respond to
CC   interleukin-15 stimulation. In addition, the products may contain an
CC   immunostimulant. The sequences represent cDNA molecules encoding
CC   Leishmania antigens and PCR primers used to amplify DNA of the invention.

PT   Novel mutant equine herpesvirus type-1 isolates having mutation in
PT   immediate early gene, useful in formulating vaccine compositions for
PT   preventing and treating equine herpesvirus type-1 infections in horses
PT   -
XX
PS   Disclosure; Page 47-51; 68pp; English.
XX
CC   The present invention relates to a mutant equine herpesvirus type-1
CC   (EHV-1) isolate, in particular a replication-competent EHV-1 isolate
CC   comprising a mutation in the immediate-early (IE) gene of the viral
CC   genome. The mutant isolate is useful for stimulating an immune response,
CC   preferably a cell-mediated or humoral immune response, against EHV-1,
CC   and for preventing or inhibiting an EHV-1 infection in a horse. The
CC   present sequence is the EHV-1 immediate early gene.

PT Novel human genes and their expression products which are
PT differentially expressed in different cell types
XX
PS Claim 1; Page 2250-2251; 2479pp; English.
XX
CC The present invention describes a library of human polynucleotides
CC comprising the sequences given in AAZ12532 to AAZ17779. Also described is
CC a method of detecting differentially expressed genes correlated with the
CC cancerous state of a mammalian cell, comprising detecting at least one
CC differentially expressed gene product in a test sample from a cell
CC suspected of being cancerous, where the gene product is encoded by one
CC of the 5248 polynucleotide sequences given in AAZ12532 to AAZ17779. The
CC polynucleotides can be used as a source of primers and probes, which can
CC be used for a variety of purpose, e.g. detection of expression levels,
CC mapping, tissue typing or profiling, forensics, genetic analysis and
CC detection of polymorphisms. Polypeptides encoded by the polynucleotides
CC can be used for raising antibodies for experimental, diagnostic and
CC therapeutic purposes. The polynucleotides may also be used to construct
CC arrays for diagnostics (which may be used to determine function of an
CC encoded protein); and to detect differences in expression levels between
CC two cells (e.g. to identify abnormal or diseased tissue in a human, to
CC identify a genetic predisposition or susceptibility to a disease such as
CC cancer). The polynucleotides of the invention are especially used in the
CC diagnosis, prognosis and management of colorectal cancer, breast cancer,
CC and lung cancer. The polynucleotides can also be used to screen for
CC peptide analogues and antagonists.

XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear -
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
```

```
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

XX
CC The present invention relates to the isolation of novel human colon
CC associated polypeptides (AAU22468-AAU22701), and the cDNA and genomic
CC sequences encoding for them. The sequences of the invention are useful
CC in the diagnosis, treatment, prevention and/or prognosis of disorders
CC of the colon including colon cancer, congenital abnormalities
CC (e.g. atresia and stenosis), bacterial and viral infections,
CC inflammatory bowel disease (IBD), neoplastic cell disorders
CC (e.g. polyps and adenomas, intestinal inflammatory disorders, colitis,
CC colonic inflammation, diarrhoea and dysentery, malabsorption syndromes
CC (e.g. lactose intolerance), intestinal obstruction and sigmoid diseases.
CC The polynucleotides sequences of the invention can also be used in gene
CC therapy. AAS39582-AAS40060 represent DNA sequences encoding for the
CC novel human colon associated polypeptides of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 27916; 3071pp + Sequence Listing; English.

```
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 27932; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 42255; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

RESULT 2
AC116487/c
LOCUS AC116487 148106 bp DNA linear HTG 12-JUL-2002
DEFINITION Mus musculus clone RP23-428I9, WORKING DRAFT SEQUENCE, 22 ordered pieces.
ACCESSION AC116487
VERSION AC116487.2 GI:21735111
KEYWORDS HTG; HTGS_PHASE2; HTGS_DRAFT; HTGS_FULLTOP.
SOURCE Mus musculus (house mouse)
ORGANISM Mus musculus
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
REFERENCE 1 (bases 1 to 148106)
AUTHORS Birren,B., Nusbaum,C. and Lander,E.
TITLE Mus musculus, clone RP23-428I9
JOURNAL Unpublished
REFERENCE 2 (bases 1 to 148106)
AUTHORS Birren,B., Linton,L., Nusbaum,C., Lander,E., Ali,A., Allen,N., Anderson,S., Barna,N., Bastien,V., Bloom,T., Boguslavkiy,L., Boukhgalter,B., Brown,A., Camarata,J., Campopiano,A., Chang,J., Chazaro,B., Choepel,Y., Colangelo,M., Collins,S., Collymore,A., Cook,A., Cooke,P., DeArellano,K., Dewar,K., Diaz,J.S., Dodge,S., Faro,S., Ferreira,P., FitzHugh,W., Gage,D., Galagan,J., Gardyna,S., Ginde,S., Gord,S., Goyette,M., Graham,L., Grand-Pierre,N., Hagos,B., Horton,L., Hulme,W., Iliev,I., Johnson,R., Jones,C., Kamat,A., Karatas,A., Kells,C., LaRocque,K., Lamazares,R., Landers,T., Lehoczky,J., Levine,R., Lindblad-Toh,K., Liu,G., MacLean,C., Macdonald,P., Major,J., Marquis,N., Matthews,C., McCarthy,M., McEwan,P., McKernan,K., Meldrim,J., Meneus,L., Mihova,T., Mlenga,V., Murphy,T., Naylor,J., Nguyen,C., Nicol,R., Norbu,C., Norman,C.H., O'Connor,T., O'Donnell,P., O'Neil,D., Oliver,J., Peterson,K., Phunkhang,P., Pierre,N., Pollara,V., Raymond,C., Retta,R., Rieback,M., Riley,R., Rise,C., Rogov,P., Roman,J., Rosetti,M., Roy,A., Santos,R., Schauer,S., Schupback,R., Seaman,S., Severy,P., Spencer,B., Stange-Thomann,N., Stojanovic,N., Strauss,N., Subramanian,A., Talamas,J., Tesfaye,S., Theodore,J., Topham,K., Travers,M., Travis,N., Trigilio,J., Vassiliev,H., Viel,R., Vo,A., Wilson,B., Wu,X., Wyman,D., Ye,W.J., Young,G., Zainoun,J., Zembek,L., Zimmer,A. and Zody,M.

                Contact: sequence_submissions@genome.wi.mit.edu
            ---------- Project Information
                Center project name: L23947
                Center clone name: 428_I_9
            ---------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 138537 bases at least Q40
                Consensus quality: 143163 bases at least Q30
                Consensus quality: 144845 bases at least Q20
                Insert size: 160000; agarose-fp
                Insert size: 146006; sum-of-contigs
                Quality coverage: 5.6 in Q20 bases; agarose-fp
                Quality coverage: 6.1 in Q20 bases; sum-of-contigs
            ----------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 22 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    13805: contig of 13805 bp in length
            *    13806    13905: gap of 100 bp
            *    13906    14560: contig of 655 bp in length
            *    14561    14660: gap of 100 bp

TITLE Direct Submission
JOURNAL Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 10, 2003 this sequence version replaced gi:25139860.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
-------------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
-------------- Project Information
Center project name: GHAA
Center clone name: CH230-112E16
-------------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 219762 bases at least Q40
Consensus quality: 223776 bases at least Q30
Consensus quality: 226617 bases at least Q20
Estimated insert size: 230040; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will

```
          * be preserved.
          *        1   263276: contig of 263276 bp in length
          *   263277   263376: gap of unknown length
          *   263377   265401: contig of 2025 bp in length.

                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L25264
                Center clone name: 228_F_21
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 164030 bases at least Q40
                Consensus quality: 164471 bases at least Q30
                Consensus quality: 164601 bases at least Q20
                Insert size: 166000; agarose-fp
                Insert size: 164680; sum-of-contigs
                Quality coverage: 11.1 in Q20 bases; agarose-fp
                Quality coverage: 11.2 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1027: contig of 1027 bp in length
            *     1028     1127: gap of 100 bp
            *     1128    16448: contig of 15321 bp in length
            *    16449    16548: gap of 100 bp
            *    16549    76346: contig of 59798 bp in length
            *    76347    76446: gap of 100 bp
            *    76447   103034: contig of 26588 bp in length
            *   103035   103134: gap of 100 bp
            *   103135   153662: contig of 50528 bp in length
            *   153663   153762: gap of 100 bp
            *   153763   165180: contig of 11418 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:22855232.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
```

```
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: L25975
                Center clone name: 358_I_14
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 203377 bases at least Q40
                Consensus quality: 205277 bases at least Q30
                Consensus quality: 206093 bases at least Q20
                Insert size: 188000; agarose-fp
                Insert size: 206550; sum-of-contigs
                Quality coverage: 10.1 in Q20 bases; agarose-fp
                Quality coverage: 9.2 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1438: contig of 1438 bp in length
            *     1439     1538: gap of 100 bp
            *     1539     2410: contig of 872 bp in length
            *     2411     2510: gap of 100 bp
            *     2511     3868: contig of 1358 bp in length
            *     3869     3968: gap of 100 bp
            *     3969     5765: contig of 1797 bp in length
            *     5766     5865: gap of 100 bp

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L22426
                Center clone name: 138_J_12
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 227366 bases at least Q40
                Consensus quality: 227820 bases at least Q30
                Consensus quality: 228087 bases at least Q20
```

```
            Insert size: 230000; agarose-fp
            Insert size: 228319; sum-of-contigs
            Quality coverage: 12.8 in Q20 bases; agarose-fp
            Quality coverage: 12.9 in Q20 bases; sum-of-contigs
          ----------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 7 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *        1    48936: contig of 48936 bp in length
          *    48937    49036: gap of 100 bp
          *    49037    50559: contig of 1523 bp in length
          *    50560    50659: gap of 100 bp
          *    50660    56278: contig of 5619 bp in length
          *    56279    56378: gap of 100 bp
          *    56379    90153: contig of 33775 bp in length
          *    90154    90253: gap of 100 bp
          *    90254   114936: contig of 24683 bp in length
          *   114937   115036: gap of 100 bp
          *   115037   207735: contig of 92699 bp in length
          *   207736   207835: gap of 100 bp
          *   207836   228919: contig of 21084 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 10, 2002 this sequence version replaced gi:22539029.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: GDSM
                Center clone name: CH230-10F20
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 227608 bases at least Q40
                Consensus quality: 230076 bases at least Q30
                Consensus quality: 231849 bases at least Q20
                Estimated insert size: 235882; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   245853: contig of 245853 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:22857077.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GOMT
                Center clone name: CH230-134D4
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 207904 bases at least Q40
                Consensus quality: 209884 bases at least Q30
                Consensus quality: 210779 bases at least Q20
                Estimated insert size: 213748; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   220464: contig of 220464 bp in length.

----------------------------------------------------
-------------- Summary Statistics  --------------
Sequencing vector: M13; %
Sequencing vector: plasmid; %
Chemistry: Dye-primer ET; % of reads
Chemistry: Dye-terminator Big Dye; % of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 221212 bases at least Q40
Consensus quality: 224001 bases at least Q30
Consensus quality: 225617 bases at least Q20
----------------------------------------------------
* NOTE: This is a 'working draft' sequence. It currently
* consists of 31 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*        1     1212: contig of 1212 bp in length
*     1213     1312: gap of unknown length
*     1313     2808: contig of 1496 bp in length
*     2809     2908: gap of unknown length
*     2909     4509: contig of 1601 bp in length
*     4510     4609: gap of unknown length
*     4610     6126: contig of 1517 bp in length
*     6127     6226: gap of unknown length
*     6227     7673: contig of 1447 bp in length
*     7674     7773: gap of unknown length
*     7774     8968: contig of 1195 bp in length
*     8969     9068: gap of unknown length
*     9069    10583: contig of 1515 bp in length
*    10584    10683: gap of unknown length
*    10684    11778: contig of 1095 bp in length
*    11779    11878: gap of unknown length
*    11879    13464: contig of 1586 bp in length
*    13465    13564: gap of unknown length
*    13565    14971: contig of 1407 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:23269184.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

                Center clone name: CH230-126O22
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 219903 bases at least Q40
                Consensus quality: 222552 bases at least Q30
                Consensus quality: 224170 bases at least Q20
                Estimated insert size: 232969; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1   271976: contig of 271976 bp in length
            *   271977   272076: gap of unknown length
            *   272077   276954: contig of 4878 bp in length.

            -------
            Summary Statistics
            Consensus quality: 210402 bases at least Q40
            Consensus quality: 220249 bases at least Q30
            Consensus quality: 222247 bases at least Q20
            Estimated insert size: 231000; agarose-fp estimation
            Estimated insert size: 226710; sum-of-contigs estimation
            Quality coverage:  8.2 in Q20 bases; agarose-fp estimation
            Quality coverage:  8.35 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 24 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1213: contig of 1213 bp in length
            *     1214     1313: gap of unknown length
            *     1314     2782: contig of 1469 bp in length
            *     2783     2882: gap of unknown length
            *     2883     3987: contig of 1105 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAR-2003) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 13, 2003 this sequence version replaced gi:28209782.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

                Center clone name: 148_J_22
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 267377 bases at least Q40
                Consensus quality: 268701 bases at least Q30
                Consensus quality: 269200 bases at least Q20
                Insert size: 236000; agarose-fp
                Insert size: 269590; sum-of-contigs
                Quality coverage: 10.8 in Q20 bases; agarose-fp
                Quality coverage: 9.5 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1      710: contig of 710 bp in length
            *      711      810: gap of 100 bp
            *      811     5531: contig of 4721 bp in length
            *     5532     5631: gap of 100 bp
            *     5632     7825: contig of 2194 bp in length
            *     7826     7925: gap of 100 bp
            *     7926    13529: contig of 5604 bp in length
            *    13530    13629: gap of 100 bp
            *    13630    19264: contig of 5635 bp in length
            *    19265    19364: gap of 100 bp
            *    19365    25381: contig of 6017 bp in length
            *    25382    25481: gap of 100 bp

COMMENT     E. coli transposon insertion:The present data does not contain E.
            coli transposon sequences which integrated in the
```

```
          original/previous sequences.  We determined the boundary between
          the insertion and genomic sequences experimentally, removed the
          insertion sequences, reconstituted the present data. The sequencing
          project is supported by Japan Science Technology Corporation (JST)
          and The Institute of Physical and Chemical Research (RIKEN).

RESULT 24
U93872/c
LOCUS U93872 133661 bp DNA linear VRL 09-JUL-2001
DEFINITION Kaposi's sarcoma-associated herpesvirus glycoprotein M, DNA replication protein, glycoprotein, DNA replication protein, FLICE inhibitory protein and v-cyclin genes, complete cds, and tegument protein gene, partial cds.
ACCESSION U93872
VERSION U93872.2 GI:14627174
KEYWORDS .
SOURCE Human herpesvirus 8 (Kaposi's sarcoma-associated herpesvirus - Human herpesvirus 8)
ORGANISM Human herpesvirus 8
Viruses; dsDNA viruses, no RNA stage; Herpesviridae; Gammaherpesvirinae; Rhadinovirus.
REFERENCE 1 (bases 29032 to 30108; 117733 to 118431)
AUTHORS Zhong,W., Wang,H., Herndier,B. and Ganem,D.
TITLE Restricted expression of Kaposi sarcoma-associated herpesvirus (human herpesvirus 8) genes in Kaposi sarcoma
JOURNAL Proc. Natl. Acad. Sci. U.S.A. 93 (13), 6641-6646 (1996)
MEDLINE 96270595
PUBMED 8692871
REFERENCE 2 (bases 17242 to 17856)
AUTHORS Neipel,F., Albrecht,J.C., Ensser,A., Huang,Y.Q., Li,J.J., Friedman-Kien,A.E. and Fleckenstein,B.
TITLE Human herpesvirus 8 encodes a homolog of interleukin-6
JOURNAL J. Virol. 71 (1), 839-842 (1997)
MEDLINE 97138401
PUBMED 8985427
REFERENCE 3 (bases 123309 to 124082)
AUTHORS Li,M., Lee,H., Yoon,D.W., Albrecht,J.C., Fleckenstein,B., Neipel,F. and Jung,J.U.
TITLE Kaposi's sarcoma-associated herpesvirus encodes a functional cyclin
JOURNAL J. Virol. 71 (3), 1984-1991 (1997)
MEDLINE 97184528
PUBMED 9032330
REFERENCE 4 (bases 122660 to 123226)
AUTHORS Thome,M., Schneider,P., Hofmann,K., Fickenscher,H., Meinl,E., Neipel,F., Mattmann,C., Burns,K., Bodmer,J.L., Schroter,M., Scaffidi,C., Krammer,P.H., Peter,M.E. and Tschopp,J.
TITLE Viral FLICE-inhibitory proteins (FLIPs) prevent apoptosis induced by death receptors
JOURNAL Nature 386 (6624), 517-521 (1997)
MEDLINE 97242415
PUBMED 9087414
REFERENCE 5 (bases 1 to 133661)
AUTHORS Neipel,F., Albrecht,J.C. and Fleckenstein,B.
TITLE Cell-homologous genes in the Kaposi's sarcoma-associated rhadinovirus human herpesvirus 8: determinants of its pathogenicity?
JOURNAL J. Virol. 71 (6), 4187-4192 (1997)
MEDLINE 97296220
PUBMED 9151804
REFERENCE 6 (bases 1 to 133661)
AUTHORS Neipel,F., Albrecht,J.-C., Ensser,A., Huang,Y.-Q., Li,J.J., Friedman-Kien,A.E. and Fleckenstein,B.
TITLE The genome of human herpesvirus 8 cloned from Kaposi's sarcoma
JOURNAL Unpublished
REFERENCE 7 (bases 1 to 133661)
AUTHORS Neipel,F., Albrecht,J.-C., Ensser,A., Huang,Y.-Q., Li,J.J., Friedman-Kien,A.E. and Fleckenstein,B.

  TITLE     Direct Submission
  JOURNAL   Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 15, 2002 this sequence version replaced gi:22856759.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GRIZ
                Center clone name: CH230-276C17
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 169880 bases at least Q40
                Consensus quality: 170862 bases at least Q30
                Consensus quality: 171472 bases at least Q20
                Estimated insert size: 169890; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1   181513: contig of 181513 bp in length
            *   181514   181613: gap of unknown length
            *   181614   182673: contig of 1060 bp in length
            *   182674   182773: gap of unknown length
            *   182774   183863: contig of 1090 bp in length.

TITLE Direct Submission
JOURNAL Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 9, 2003 this sequence version replaced gi:24941692.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center project name: GBKX
Center clone name: CH230-4C12
-------------- Summary Statistics
Assembly program: Atlas;
Consensus quality: 216649 bases at least Q40
Consensus quality: 220061 bases at least Q30
Consensus quality: 222335 bases at least Q20
Estimated insert size: 232189; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 231801: contig of 231801 bp in length
* 231802 231901: gap of unknown length
* 231902 234939: contig of 3038 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24817844.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

              Quality coverage: 11.2 in Q20 bases; agarose-fp
              Quality coverage: 11.3 in Q20 bases; sum-of-contigs
          --------------
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 7 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *        1    11975: contig of 11975 bp in length

COMMENT     On Jan 25, 2003 this sequence version replaced gi:25955774.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-358I19 is
            from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24818868.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GASZ
                Center clone name: CH230-4B15
            -------------- Summary Statistics
                Assembly program: Atlas;
                Consensus quality: 224879 bases at least Q40
                Consensus quality: 227006 bases at least Q30
                Consensus quality: 228555 bases at least Q20
                Estimated insert size: 237610; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   235855: contig of 235855 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:23664821.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

TITLE Direct Submission
JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 13, 2003 this sequence version replaced gi:29469497.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

  TITLE     Direct Submission
  JOURNAL   Submitted (11-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 9, 2002 this sequence version replaced gi:22795167.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GPHZ
                Center clone name: CH230-255D23
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 380245 bases at least Q40
                Consensus quality: 385911 bases at least Q30
                Consensus quality: 389757 bases at least Q20
                Estimated insert size: 390792; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1   235023: contig of 235023 bp in length
            *   235024   235123: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:22772430.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Summary Statistics
                Assembly program: Atlas;
                Consensus quality: 229894 bases at least Q40
                Consensus quality: 231178 bases at least Q30
                Consensus quality: 232607 bases at least Q20
                Estimated insert size: 244941; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1   231233: contig of 231233 bp in length
            *   231234   231333: gap of unknown length
            *   231334   233041: contig of 1708 bp in length
            *   233042   233141: gap of unknown length
            *   233142   237019: contig of 3878 bp in length.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
            beginning 'Dr' were identified by the Recon repeat discovery system
            (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr'
            were identified by Rick Waterman (Stephen Johnson lab, WashU). For
            further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml
            CH211-197E11 is from a CHORI-211 BAC library

               Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
               Center project name: L18718
               Center clone name: 275_P_22
            -------------- Summary Statistics
               Sequencing vector: Plasmid; n/a; 100% of reads
               Chemistry: Dye-terminator Big Dye; 100% of reads
               Assembly program: Phrap; version 0.960731
               Consensus quality: 221447 bases at least Q40
               Consensus quality: 222092 bases at least Q30
               Consensus quality: 222332 bases at least Q20
               Insert size: 194000; agarose-fp
               Insert size: 222456; sum-of-contigs
               Quality coverage: 11.2 in Q20 bases; agarose-fp
               Quality coverage: 9.8 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     5792: contig of 5792 bp in length
            *     5793     5892: gap of 100 bp
            *     5893     6990: contig of 1098 bp in length
            *     6991     7090: gap of 100 bp
            *     7091    12953: contig of 5863 bp in length
            *    12954    13053: gap of 100 bp
            *    13054    34245: contig of 21192 bp in length
            *    34246    34345: gap of 100 bp
            *    34346    60533: contig of 26188 bp in length
            *    60534    60633: gap of 100 bp
            *    60634   100582: contig of 39949 bp in length
            *   100583   100682: gap of 100 bp
            *   100683   192104: contig of 91422 bp in length
            *   192105   192204: gap of 100 bp
            *   192205   223156: contig of 30952 bp in length.

  JOURNAL   Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 15, 2002 this sequence version replaced gi:23908406.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 9 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (11-JUL-1997) Department of Genetics, Washington
            University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
COMMENT     On Nov 21, 1997 this sequence version replaced gi:2623547.
            Submitted by:
                    Genome Sequencing Center
                    Department of Genetics, Washington University,
                    St. Louis, MO 63108, USA
                    e-mail: rw@nematode.wustl.edu

            NOTICE:  This sequence may not be the entire insert of this clone.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we provide a small overlap between
            neighboring submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded or sequenced with an alternate
            chemistry; an attempt was made to resolve all sequencing problems,
            such as compressions and repeats; all regions were covered by
            sequence from more than one subclone

            Library information:
            Gridded Fugu library from the UK HGMP Resource Centre at Hinxton.

                        NEIGHBORING COSMID INFORMATION:

            The left neighbor is 259C6, 19100 base overlap. The actual start of
            this clone is at base position 22192 of 259C6; the actual end is at
            base position 28199 of 48D10.

            This cosmid contains a tandem repeat from 23145 to 25326. The
            tandem is deleted, and has regions which are single stranded.
            Attempts to size the deletion with digest data were inconclusive.
            The size was estimated to be
            1.7 kb from a PCR product obtained by Dr. Dick Sandford.

            NOTES:

            Coding sequences below are predicted from computer analysis, using
            the program Genefinder(P. Green and L. Hillier, ms in preparation).

COMMENT     On Sep 14, 2002 this sequence version replaced gi:22094155.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.

TITLE Direct Submission
JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 13, 2003 this sequence version replaced gi:25188618.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

            Grovemont Circle, Gaithersburg, MD 20877, USA
COMMENT     On Aug 30, 2002 this sequence version replaced gi:17155042.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: arp
                 Center clone name: 205P11

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 87141 bases at least Q40
                 Consensus quality: 87741 bases at least Q30
                 Consensus quality: 87993 bases at least Q20
                 Insert size: 89000; agarose-fp
                 Insert size: 88116; sum-of-contigs
                 Quality coverage: 10.68x in Q20 bases; agarose-fp
                 Quality coverage: 10.79x in Q20 bases; sum-of-contigs
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    31156: contig of 31156 bp in length
            *    31157    31256: gap of unknown length
            *    31257    36515: contig of 5259 bp in length
            *    36516    36615: gap of unknown length
            *    36616    38675: contig of 2060 bp in length
            *    38676    38775: gap of unknown length
            *    38776    41147: contig of 2372 bp in length
            *    41148    41247: gap of unknown length
            *    41248    48183: contig of 6936 bp in length
            *    48184    48283: gap of unknown length
            *    48284    50318: contig of 2035 bp in length
            *    50319    50418: gap of unknown length
            *    50419    88716: contig of 38298 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 9, 2002 this sequence version replaced gi:23101414.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GOGT
                Center clone name: CH230-271E13
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 191506 bases at least Q40
                Consensus quality: 192743 bases at least Q30
                Consensus quality: 193813 bases at least Q20
                Estimated insert size: 195908; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   193483: contig of 193483 bp in length
            *  193484   193583: gap of unknown length
            *  193584   194691: contig of 1108 bp in length
            *  194692   194791: gap of unknown length
            *  194792   196008: contig of 1217 bp in length
            *  196009   196108: gap of unknown length
            *  196109   197891: contig of 1783 bp in length.

COMMENT     On Nov 19, 2002 this sequence version replaced gi:23101014.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
```

in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GSOU
Center clone name: CH230-126F2
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 228855 bases at least Q40
Consensus quality: 231441 bases at least Q30
Consensus quality: 233224 bases at least Q20
Estimated insert size: 235507; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
---
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 78039: contig of 78039 bp in length
* 78040 78139: gap of unknown length
* 78140 241585: contig of 163446 bp in length
* 241586 241685: gap of unknown length
* 241686 245258: contig of 3573 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24819680.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

          -------------- Project Information
            Center project name: L23281
            Center clone name: 59_I_22
          -------------- Summary Statistics
            Sequencing vector: Plasmid; n/a; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Assembly program: Phrap; version 0.960731
            Consensus quality: 246357 bases at least Q40
            Consensus quality: 246703 bases at least Q30
            Consensus quality: 246763 bases at least Q20
            Insert size: 242000; agarose-fp
            Insert size: 246768; sum-of-contigs
            Quality coverage: 11.2 in Q20 bases; agarose-fp
            Quality coverage: 11.0 in Q20 bases; sum-of-contigs
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 3 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *       1    31803: contig of 31803 bp in length
          *   31804    31903: gap of 100 bp
          *   31904    80596: contig of 48693 bp in length
          *   80597    80696: gap of 100 bp
          *   80697   246968: contig of 166272 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:25092334.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center

            -------------- Project Information
                Center project name: GHRX
                Center clone name: CH230-208G21
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 223543 bases at least Q40
                Consensus quality: 225303 bases at least Q30
                Consensus quality: 226470 bases at least Q20
                Estimated insert size: 235136; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   233348: contig of 233348 bp in length
            *  233349   233448: gap of unknown length
            *  233449   234474: contig of 1026 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:23266005.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (30-NOV-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 6, 2002 this sequence version replaced gi:23573260.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-202K13 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

TITLE Direct Submission
JOURNAL Submitted (21-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT ---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: KDFC
Center clone name: CH230-372P16
---------- Summary Statistics
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye: 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 165147 bases at least Q40
Consensus quality: 173510 bases at least Q30
Consensus quality: 180635 bases at least Q20
Estimated insert size: 169130; sum-of-contigs estimation
Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 73 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 1049: contig of 1049 bp in length
* 1050 1149: gap of unknown length
* 1150 2432: contig of 1283 bp in length
* 2433 2532: gap of unknown length
* 2533 3890: contig of 1358 bp in length
* 3891 3990: gap of unknown length
* 3991 5466: contig of 1476 bp in length
* 5467 5566: gap of unknown length
* 5567 7037: contig of 1471 bp in length
* 7038 7137: gap of unknown length
* 7138 8152: contig of 1015 bp in length
* 8153 8252: gap of unknown length
* 8253 9570: contig of 1318 bp in length
* 9571 9670: gap of unknown length
* 9671 11147: contig of 1477 bp in length
* 11148 11247: gap of unknown length
* 11248 12667: contig of 1420 bp in length
* 12668 12767: gap of unknown length
* 12768 13786: contig of 1019 bp in length
* 13787 13886: gap of unknown length
* 13887 14962: contig of 1076 bp in length
* 14963 15062: gap of unknown length
* 15063 16631: contig of 1569 bp in length
* 16632 16731: gap of unknown length
* 16732 17738: contig of 1007 bp in length
* 17739 17838: gap of unknown length
* 17839 19324: contig of 1486 bp in length
* 19325 19424: gap of unknown length
* 19425 21063: contig of 1639 bp in length
* 21064 21163: gap of unknown length

  TITLE    Direct Submission
  JOURNAL  Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
           of Molecular and Human Genetics, Baylor College of Medicine, One
           Baylor Plaza, Houston, TX 77030, USA
COMMENT    On May 9, 2003 this sequence version replaced gi:24955409.
           The sequence in this assembly is a combination of BAC based reads
           and whole genome shotgun sequencing reads assembled using Atlas
           (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
           in the feature table below represents a scaffold in the Atlas
           assembly (a 'contig-scaffold'). Within each contig-scaffold,
           individual sequence contigs are ordered and oriented, and separated
           by sized gaps filled with Ns to the estimated size. The sequence
           may extend beyond the ends of the clone and there may be sequence
           contigs within a contig-scaffold that consist entirely of whole
           genome shotgun sequence reads. Both end sequences and whole genome
           shotgun sequence only contigs will be indicated in the feature
           table.

COMMENT     On Sep 10, 2002 this sequence version replaced gi:21722802.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.

TITLE Direct Submission

JOURNAL Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On Nov 13, 2002 this sequence version replaced gi:23665230.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu

---------- Project Information
Center project name: GOPR
Center clone name: CH230-95C4

---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 222780 bases at least Q40
Consensus quality: 224645 bases at least Q30
Consensus quality: 225630 bases at least Q20
Estimated insert size: 230869; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

---------- * NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 242482: contig of 242482 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24819678.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 19, 2002 this sequence version replaced gi:21738042.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            ---------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            ---------- Project Information
                Center project name: GQEA
                Center clone name: CH230-228K2
            ---------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 233404 bases at least Q40
                Consensus quality: 236957 bases at least Q30
                Consensus quality: 239428 bases at least Q20
                Estimated insert size: 252351; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            ----------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   170363: contig of 170363 bp in length
            *  170364   170463: gap of unknown length
            *  170464   271425: contig of 100962 bp in length
            *  271426   271525: gap of unknown length
            *  271526   272652: contig of 1127 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23908265.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24957732.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GGLN
                Center clone name: CH230-133G18
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 224443 bases at least Q40
                Consensus quality: 225706 bases at least Q30
                Consensus quality: 226616 bases at least Q20
                Estimated insert size: 232595; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   229838: contig of 229838 bp in length
            *  229839   229938: gap of unknown length
            *  229939   231321: contig of 1383 bp in length.

            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KEPT
                Center clone name: CH230-408K24
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 126303 bases at least Q40
                Consensus quality: 130569 bases at least Q30
                Consensus quality: 134257 bases at least Q20
                Estimated insert size: 128743; sum-of-contigs estimation
                Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 39 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1198: contig of 1198 bp in length
            *     1199     1298: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (12-APR-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Feb 3, 2001 this sequence version replaced gi:10717286.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L9178
                Center clone name: 129_L_22
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 7% of reads
                Sequencing vector: Plasmid; n/a; 93% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 151306 bases at least Q40
                Consensus quality: 164443 bases at least Q30
                Consensus quality: 169708 bases at least Q20
                Insert size: 230000; agarose-fp
                Insert size: 172292; sum-of-contigs
                Quality coverage: 2.4 in Q20 bases; agarose-fp
                Quality coverage: 3.2 in Q20 ba.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 70 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

  TITLE     Direct Submission
```

```
JOURNAL     Submitted (09-OCT-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 10, 2001 this sequence version replaced gi:14269983.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-121M7 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP23-121M7 The true
            left end of clone RP23-85M21 is at 142216 in this sequence. The
            true right end of clone RP23-10K12 is at 78004 in this sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (04-APR-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 15, 2001 this sequence version replaced gi:16596742.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-10K12 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

TITLE Direct Submission
JOURNAL Submitted (22-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 22, 2002 this sequence version replaced gi:21731477.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

-------------- Project Information
Center-project name: GKEV
Center clone name: CH230-129E1
-------------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 226971 bases at least Q40
Consensus quality: 228331 bases at least Q30
Consensus quality: 229024 bases at least Q20
Estimated insert size: 260341; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 6 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 71565: contig of 71565 bp in length
* 71566 71665: gap of unknown length
* 71666 165635: contig of 93970 bp in length
* 165636 165735: gap of unknown length
* 165736 246680: contig of 80945 bp in length
* 246681 246780: gap of unknown length
* 246781 247856: contig of 1076 bp in length
* 247857 247956: gap of unknown length
* 247957 249454: contig of 1498 bp in length
* 249455 249554: gap of unknown length
* 249555 251656: contig of 2102 bp in length.

            ----------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2678: contig of 2678 bp in length
            *     2679     2778: gap of 100 bp

            ----------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-141B15 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:22855982.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: GZNP
                Center clone name: CH230-381B8
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 150327 bases at least Q40
                Consensus quality: 152783 bases at least Q30
                Consensus quality: 154221 bases at least Q20
                Estimated insert size: 156901; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
```

```
          * as soon as it is available and the accession number will
          * be preserved.
          *        1   192049: contig of 192049 bp in length
          *   192050   192149: gap of unknown length
          *   192150   196519: contig of 4370 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (29-JUN-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Feb 22, 2002 this sequence version replaced gi:18476769.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-45H23 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

TITLE Direct Submission
JOURNAL Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 20, 2002 this sequence version replaced gi:23908319.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GVMT
Center clone name: CH230-448L22
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 170842 bases at least Q40
Consensus quality: 172543 bases at least Q30
Consensus quality: 173598 bases at least Q20
Estimated insert size: 173300; sum-of-contigs estimation
Quality coverage: 10x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 78593: contig of 78593 bp in length
* 78594 78693: gap of unknown length
* 78694 216223: contig of 137530 bp in length
* 216224 216323: gap of unknown length
* 216324 217604: contig of 1281 bp in length.

TITLE Direct Submission

JOURNAL Submitted (12-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On Oct 12, 2002 this sequence version replaced gi:21747233.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

-------------- Genome Center
Center: Baylor College of Medicine
Center code: BCM

Contact: hgsc-help@bcm.tmc.edu
-------------- Project Information
Center project name: GVTN
Center clone name: CH230-379J13

-------------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 186506 bases at least Q40
Consensus quality: 187889 bases at least Q30
Consensus quality: 188707 bases at least Q20
Estimated insert size: 191116; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 201016: contig of 201016 bp in length.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-218C2 is from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.

  TITLE     Direct Submission
  JOURNAL   Submitted (22-SEP-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 19, 2002 this sequence version replaced gi:21745850.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GTOP
                Center clone name: CH230-68L11
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 247058 bases at least Q40
                Consensus quality: 248642 bases at least Q30
                Consensus quality: 249755 bases at least Q20
                Estimated insert size: 277580; sum-of-contigs estimation
                Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1   245055: contig of 245055 bp in length
            *    245056   245155: gap of unknown length
            *    245156   257363: contig of 12208 bp in length
            *    257364   257463: gap of unknown length
            *    257464   258494: contig of 1031 bp in length
            *    258495   258594: gap of unknown length
            *    258595   259652: contig of 1058 bp in length
            *    259653   259752: gap of unknown length
            *    259753   262289: contig of 2537 bp in length.

  JOURNAL   Submitted (18-SEP-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 18, 2002 this sequence version replaced gi:21738195.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.

COMMENT     On May 14, 2003 this sequence version replaced gi:29561863.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.

TITLE Direct Submission
JOURNAL Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 10, 2003 this sequence version replaced gi:24942388.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

```
            ---------- Project Information
                Center project name: GETX
                Center clone name: CH230-88E19
            ---------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 233657 bases at least Q40
                Consensus quality: 237987 bases at least Q30
                Consensus quality: 241136 bases at least Q20
                Estimated insert size: 250075; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            ----------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3892: contig of 3892 bp in length
            *     3893     3992: gap of unknown length
            *     3993   273529: contig of 269537 bp in length
            *   273530   273629: gap of unknown length
            *   273630   274710: contig of 1081 bp in length
            *   274711   274810: gap of unknown length
            *   274811   276051: contig of 1241 bp in length
            *   276052   276151: gap of unknown length
            *   276152   277399: contig of 1248 bp in length
            *   277400   277499: gap of unknown length
            *   277500   278685: contig of 1186 bp in length
            *   278686   278785: gap of unknown length
            *   278786   283593: contig of 4808 bp in length.

  JOURNAL   Submitted (31-MAY-2002) Celera Genomics, 45 West Gude Drive,
            Rockville, MD 20850, USA
COMMENT     The strings of n's in this record represent gaps between contigs,
            and the length of each string corresponds to the length of the gap
            except where there are 20 n's.  A string of 20 n's represents a gap
            of unknown length.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23195993.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KBYE
                Center clone name: CH230-101A12
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 225270 bases at least Q40
                Consensus quality: 227698 bases at least Q30
                Consensus quality: 229450 bases at least Q20
                Estimated insert size: 226046; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    15508: contig of 15508 bp in length
            *    15509    15608: gap of unknown length
            *    15609   224342: contig of 208734 bp in length
            *   224343   224442: gap of unknown length
            *   224443   225652: contig of 1210 bp in length
            *   225653   225752: gap of unknown length
            *   225753   238255: contig of 12503 bp in length.

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 9, 2002 this sequence version replaced gi:23101726.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GMPU
                Center clone name: CH230-10104
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 227436 bases at least Q40
                Consensus quality: 229834 bases at least Q30
                Consensus quality: 231317 bases at least Q20
                Estimated insert size: 232522; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    62473: contig of 62473 bp in length
            *    62474    62573: gap of unknown length
            *    62574   236709: contig of 174136 bp in length
            *   236710   236809: gap of unknown length
            *   236810   237884: contig of 1075 bp in length
            *   237885   237984: gap of unknown length
            *   237985   239022: contig of 1038 bp in length
            *   239023   239122: gap of unknown length
            *   239123   240200: contig of 1078 bp in length.

            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:22857224.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
          of Molecular and Human Genetics, Baylor College of Medicine, One
          Baylor Plaza, Houston, TX 77030, USA
COMMENT   On May 9, 2003 this sequence version replaced gi:24818271.
          The sequence in this assembly is a combination of BAC based reads
          and whole genome shotgun sequencing reads assembled using Atlas
          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
          in the feature table below represents a scaffold in the Atlas
          assembly (a 'contig-scaffold'). Within each contig-scaffold,
          individual sequence contigs are ordered and oriented, and separated
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.

              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: GBYH
              Center clone name: CH230-6K12
          -------------- Summary Statistics
              Assembly program: Atlas;
              Consensus quality: 226044 bases at least Q40
              Consensus quality: 227924 bases at least Q30
              Consensus quality: 229373 bases at least Q20
              Estimated insert size: 234613; sum-of-contigs estimation
              Quality coverage: 9x in Q20 bases; sum-of-contigs estimation
          ----------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 2 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1   236832: contig of 236832 bp in length
          *   236833   236932: gap of unknown length
          *   236933   238046: contig of 1114 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23195740.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
```

```
            Center project name: aqv
            Center clone name: 277I07

          The sequence data in this record represents an 'enhanced'
          version of a Phase 2 submission. Specifically, the indicated
          order and orientation of each sequence contig has been
          established using one or more of the following: read-pair
          data from individual subclones, overlaps with neighboring
          clones, alignment with available reference sequence (e.g.,
          human), and/or confirmation by PCR testing. In addition,
          the sequence assembly is based on at least 8X average
          coverage in Q20 bases and has been reviewed to rule out
          gross misassemblies, the low-quality ends of sequence
          contigs have been trimmed away, and each base is associated
          with a Phrap-derived quality score.
          -------------- Summary Statistics
            Sequencing vector: plasmid; n/a; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 162840 bases at least Q40
            Consensus quality: 163595 bases at least Q30
            Consensus quality: 164091 bases at least Q20
            Insert size: 163000; agarose-fp
            Insert size: 164318; sum-of-contigs
            Quality coverage: 8.02x in Q20 bases; agarose-fp
            Quality coverage: 7.95x in Q20 bases; sum-of-contigs
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 9 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 20, 2002 this sequence version replaced gi:23803773.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GZOV
                Center clone name: CH230-386E19
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 159301 bases at least Q40
                Consensus quality: 160205 bases at least Q30
                Consensus quality: 160799 bases at least Q20
                Estimated insert size: 165067; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   174032: contig of 174032 bp in length.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            This is single pass sequence recovered from the left border of
            TDNA. This sequence lies within 300 bases of the 3' end of
            At4g17660.
            Class: TDNA tagged.

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

            This clone is from an A. gambiae BAC library (ND-TAM) provided by
            F.H. Collins and sequenced by The Institute for Genomic Research
            (TIGR). The BAC library was generated from A. gambiae PEST strain
            DNA. All DNA was extracted from newly hatched first instar larvae
            to minimize the inclusion of DNA from microorganisms that inhabit
            the gut. The DNA is derived from mixed sexes of larvae. The BAC
            library was constructed at Texas A&M Universty BAC Center
            University, College Station, Texas 77843-2123, USA using a HindIII
            partial digest.
            Seq primer: M13 Rev
            Class: BAC ends.

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     SfiI; CAB4 is a cDNA library of Vitis vinifera cv.
                     'Cabernet Sauvignon' Clone 8 berries. Sampled berries were
                     collected from field-grown vines during stage II of berry
                     growth (berries were green and hard) at approximately 60
                     days after full bloom.The average berry size was 9
                     milimeters. Sampled vines were located at the University
                     of California, Davis, Experimental Vineyard. cDNAs were
                     made by oligo-dT priming and directionally cloned. 5'and
                     3' adaptors were used in cloning as follows:
                     5'-AAGCAGTGGTATCAACGCAGAGTGGCCATTACGGCCGGG-3' and
                     5'-ATTCTAGAGGCCGAGGCGGCCGACATG-dT(30)NN-3'. Library was
                     constructed using the Clontech Creator SMART kit and
                     size-selected to contain the 0.5-3 kb size fraction."

                     /sex="Male"
                     /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2:
                     XhoI; The cDNA library was constructed from mRNA isolated
                     from 11 day old seedlings treated with that were treated
                     with 2 ugs/ml of a crude glucan elicitor preparation
                     isolated from the mycelial walls of Phytophthora sojae.
                     The  library was prepared using the Stratagene pBluescript
                     II SK(+) library  construction kit. Complementary DNA was
                     synthesized from mRNA using a primer  consisting of a
                     poly(dT) sequence with an XhoI restriction site. EcoRI
                     adaptors were ligated to the blunt-ended cDNA fragments
                     followed by XhoI  digestion. The cDNA fragments were
                     directionally cloned into the EcoRI-XhoI  restriction site
```

of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. Plant material was provided by Michael G. Hahn (Complex Carbohydrate Research Center, University of Georgia) and the library was constructed by Anu Khanna (Lila Vodkin lab , University of Illinois)."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New rhesus rhadino virus for producing non-human primate model useful
PT for testing potential treatments and efficacy of the candidate vaccine
PT for conditions associated with RRV infection
XX
PS Claim 2; Page 83-122; 141pp; English.
XX
CC The present invention describes a novel rhesus macaque rhadinovirus
CC called macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
CC RRV genome sequence, and AAB53123 to AAB53204 represent the proteins
CC encoded by the genome sequence. The present invention also specifically
CC claims the individual open reading frame (ORF) nucleotide sequences from
CC the genome which encode the individual proteins, but these sequences are
CC not given. A non-human animal infected with RRV can be used for testing
CC the efficacy of drug in the treatment of condition associated with
CC infection with RRV such as Kaposi's sarcoma, lymphoproliferative
CC disorders, B-cell hyperplasia, lymphadenopathy, splenomegaly,
CC hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by
CC administering the drug to a immuno-compromised non-human primate
CC preferably Rhesus macaque monkey obtained by as a result of infection
CC by Simian Immunodeficiency Virus (SIV). RRV is useful for producing
CC non-human primate model for testing potential treatments for conditions
CC associated with RRV infection. It is also useful for testing the
CC efficacy of the candidate vaccine against RRV infection or conditions
CC associated with its infection by administering the vaccine to the
CC subject capable of infection with RRV, inoculating the subject with RRV
CC and observing the effect of vaccine. AAC64755 to AAC64765 and AAB53205
CC to AAB53213 represent sequence used in the exemplification of the
CC present invention.

PT   Nucleic acid comprising fragment of chemically modified gene, useful
PT   for diagnosis and treatment of diseases associated with abnormal
PT   cytosine methylation  -
XX
PS   Claim 1; SEQ ID NO 1893; 32pp + Sequence Listing; German.
XX
CC   The present invention provides a number of human immune system associated
CC   genes which are modified by the methylation of cytosines. The sequences
CC   can be used in the diagnosis and treatment of immune system disorders,
CC   including eye diseases such as retinopathy, neovascular glaucoma and
CC   macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC   leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC   rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC   diseases. The present sequence is a gene of the invention.

PT   Detecting and differentiating between hematopoietic cell proliferative
PT   disorders, comprises contacting a target nucleic acid with a reagent
PT   that distinguishes between methylated and non-methylated CpG
PT   dinucleotides -
XX
PS   Claim 28; SEQ ID 111; 117pp; English.
XX
CC   The present invention describes a method for detecting and
CC   differentiating between haematopoietic cell proliferative disorders
CC   associated with at least 1 gene and/or their regulatory regions in a
CC   subject. The method comprises contacting a target nucleic acid in a
CC   biological sample obtained from the subject with at least 1 reagent,
CC   which distinguishes between methylated and non-methylated CpG
CC   dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC   represent specifically claimed nucleotide sequences from the present
CC   invention. Oligonucleotides from the present invention can be used: for
CC   differentiating between healthy haematopoietic cells and proliferative
CC   disorder haematopoietic cells; for differentiating between acute
CC   lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC   determining the cytosine methylation state and/or single nucleotide
CC   polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC   related sequences and their complements; and as primers for the
CC   amplification of haematopoietic cell proliferation disorder related
CC   DNA sequences. The nucleotide sequences from the present invention can
CC   also be used for detecting a predisposition to, differentiation between
CC   subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC   haematopoietic cell proliferative disorders. The present method enables
CC   a highly specific classification of haematopoietic cell proliferative
CC   disorders allowing for improved and informed treatment of patients.

PT  Nucleic acid comprising fragment of chemically modified gene, useful
PT  for diagnosis and treatment of diseases associated with abnormal
PT  cytosine methylation  -
XX
PS  Claim 1; SEQ ID NO 566; 32pp + Sequence Listing; German.
XX
CC  The present invention provides a number of human immune system associated
CC  genes which are modified by the methylation of cytosines. The sequences
CC  can be used in the diagnosis and treatment of immune system disorders,
CC  including eye diseases such as retinopathy, neovascular glaucoma and
CC  macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC  leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC  rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC  diseases. The present sequence is a gene of the invention.

PT  New isolated nucleic acid detection reagent for detecting 1000 or more
PT  genes from Drosophila and for elucidating cell signalling and cell-cell
PT  interactions -
XX
PS  Claim 1; SEQ ID NO 10574; 21pp + Sequence Listing; English.
XX
CC  The invention relates to an isolated nucleic acid detection reagent
CC  capable of detecting 1000 or more genes from Drosophila. The invention is
CC  useful in developmental biology and in elucidating cell signalling and
CC  cell-cell interactions in higher eukaryotes for the development of
CC  insecticides, therapeutics and pharmaceutical drugs. The invention
CC  discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC  sequences (ABL01840-ABL16175) and the encoded proteins
CC  (ABB57737-ABB72072).
CC  The sequence data for this patent did not form part of the printed
CC  specification, but was obtained in electronic format directly from WIPO
CC  at ftp.wipo.int/pub/published_pct_sequences.

PT   varicella virus genome for quality control of attenuated live varicella
PT   vaccine  -
XX
PS   Claim 1; Page 61-105; 158pp; Japanese.
XX
CC   The present sequence represents the nucleotide sequence of Varicella
CC   virus, Dumas strain. The specification describes a method for the
CC   quality control of an attenuated pox vaccine, characterised in that
CC   the DNA sequence of specific parts of the viral genome in a sample is
CC   determined and proved to be conserved rather than mutated in comparison
CC   with the same parts of a reference viral genome. The method is useful
CC   for quality control of vaccines for use in the prevention of poxvirus
CC   diseases such as chickenpox.

XX
PT   Monitoring differential expression of several genes in first Bacillus
PT   cell relative to expression of same genes in one or more second
PT   Bacillus cells, by using substrate containing Bacillus genomic
PT   sequenced tag array  -
XX
PS   Claim 11; SEQ ID NO 8155; 200pp; English.
XX
CC   The invention describes a method of monitoring differential expression of
CC   genes in a first Bacillus cell relative to expression of the genes in
CC   other Bacillus cells, comprising hybridising labelled nucleic acid probes
CC   isolated from Bacillus cells to a substrate containing array of Bacillus
CC   genomic sequenced tags (GST), examining the array, and determining
CC   relative gene expression by an observed hybridisation reporter signal of
CC   a spot in the array. The method is useful for measuring the expression of
CC   genes in a first Bacillus cell relative to expression of the same genes
CC   in one or more second Bacillus cells. The method is useful for monitoring
CC   global expression of several genes from a Bacillus cell, discovering new
CC   genes, identifying possible functions of unknown open reading frames and
CC   monitoring gene copy number variation and stability. Monitoring changes
CC   in expression of genes may be used to provide a representation of the way
CC   in which Bacillus cells adapt to changes in culture conditions,
CC   environmental stress or other physiological provocation. Extensive
CC   follow-up characterisation is unnecessary, when one spot on an array
CC   equals one gene or one open reading frame, since sequence information is
CC   available. This sequence represents a genomic sequence tag (GST) used in
CC   the method of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at
CC   ftp.wipo.int/pub/published_pct_sequences.

XX
PT  Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT  useful for preventing, diagnosing and/or treating nervous system
PT  cancers and metastases -
XX
PS  Disclosure; SEQ ID NO 6969; 1701pp + Sequence Listing; English.
XX
CC  The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC  (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC  medical conditions e.g. by protein or gene therapy. The genes are
CC  isolated from a range of human tissues disclosed in the specification.
CC  The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC  in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC  and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC  marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC  (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC  haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC  disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC  colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC  (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC  epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC  and parasitic infections.
CC  Note: The sequence data for this patent did not form part of the
CC  printed specification, but was obtained in electronic format directly
CC  from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX
PT  Diagnosing and detecting the progression of liver cancer,
PT  hepatocellular carcinoma or metastatic liver tumor in a patient,
PT  involves detecting the level of expression of two or more genes in a
PT  liver tissue sample -
XX
PS  Claim 1; SEQ ID NO 823; 298pp; English.
XX
CC  The invention relates to a novel method for diagnosing and detecting the
CC  progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC  tumour in a patient, and differentiating metastatic liver cancer from
CC  hepatocellular carcinoma in a patient, involving detecting the level of
CC  expression of two or more genes represented in ABN93503-ABN97455 in a
CC  tissue sample. The method of the invention has hepatotropic, and
CC  cytostatic activity. The method is useful for diagnosing and detecting
CC  the progression of liver cancer, hepatocellular carcinoma and metastatic
CC  liver carcinoma in a patient. The method is useful for identifying
CC  expression profiles which serve as useful diagnostic markers as well as
CC  markers that can be used to monitor disease states, disease progression,
CC  drug toxicity, drug efficacy and drug metabolism.

PT  Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT  useful for preventing, diagnosing and/or treating nervous system
PT  cancers and metastases -
XX
PS  Disclosure; SEQ ID NO 6968; 1701pp + Sequence Listing; English.
XX
CC  The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC  (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC  medical conditions e.g. by protein or gene therapy. The genes are
CC  isolated from a range of human tissues disclosed in the specification.
CC  The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC  in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC  and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC  marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC  (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC  haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC  disease, multiple sclerosis, rhéumatoid arthritis and ulcerative
CC  colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC  (d) wound healing; (e) neurological diseasés e.g. cerebral anoxia and
CC  epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC  and parasitic infections.
CC  Note: The sequence data for this patent did not form part of the
CC  printed specification, but was obtained in electronic format directly
CC  from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   Novel Chlamydia pneumoniae protein useful in the manufacture of a
PT   medicament for treatment or prevention of infection due to Chlamydia,
PT   preferably Chlamydia pneumoniae, and for diagnostic purposes  -
XX
PS   Claim 5; Page 83; 364pp; English.
XX
CC   Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia
CC   pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding
CC   them. The proteins are predicted to be immunogenic and may therefore be
CC   useful in vaccine production and for diagnostic purposes. Chlamydia
CC   pneumoniae is a common cause of respiratory disease in humans, and is
CC   also involved in the development of cardiovascular diseases such as
CC   atherosclerosis, coronary artery disease, carotid artery stenosis,
CC   myocardial infarction, cerebrovascular disease, aortic aneurysm,
CC   claudication and stroke. The proteins and nucleic acids of the invention
CC   may be used in vaccines and pharmaceutical compositions for the
CC   prevention or treatment of chlamydial infections, particularly Chlamydia
CC   pneumoniae infections. The proteins may also be used in the detection of
CC   Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched
CC   DNA probe assay or blotting techniques for determining Chlamydia
CC   pneumoniae gene expression. The present sequence represents a
CC   specifically claimed DNA which encodes a Chlamydia pneumoniae protein of
CC   the invention.

PT   Determining the degree of cytosine methylation in genomic DNA, useful
PT   for diagnosis and prognosis, comprises selective hybridization of
PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

PT   An expressed sequence tag (EST), the expression of which, or its
PT   complementary sequence, in a cell identifies the cell as a
PT   developmentally competent or incompetent cell -
XX
PS   Example 16; Page 334; 584pp; English.
XX
CC   The present invention describes an expressed sequence tag (EST), where
CC   the EST is an isolated, enriched, or purified nucleic acid sequence
CC   representing all or part of a gene, the expression of which, or its
CC   complementary sequence, in a cell identifies the cell as a
CC   developmentally competent or incompetent cell. Molecules which induce
CC   developmental competence in a cell line are useful for inducing
CC   totipotence in one or more cells. Molecules which induce developmental
CC   incompetence in a cell line are useful for preventing a full term
CC   pregnancy in an animal and inhibiting totipotence. The molecules are
CC   also useful for treating a disease in an animal by inducing development
CC   of one or more cells of the animal into a specific cell type. The
CC   present sequence represents a bovine EST which is given in the
CC   exemplification of the present invention.

PT   New mannanases for treatment of textiles, plant material and coffee
PT   extract, and in cleaning compositions  -
XX
PS   Disclosure; Page 227-228; 242pp; English.
XX
CC   The present sequence encodes a mannanase enzyme (also known as
CC   mannan endo-1,4-beta-mannosidase, beta-mannanase, or endo-1,4-mannanase).
CC   The mannanase hydrolyses galactomannans. Specifically, mannanases
CC   hydrolyse 1,4-beta-D-mannosidic linkages in mannans, galactomannans,
CC   glucomannans, and galactoglucomannans. The mannanase protein, or
CC   preparations containing it, are used to improve properties of cellulosic
CC   or synthetic fibres, yarn or (non)woven fabrics (removal of mannan-based
CC   sizes or printing pastes). They are also used to degrade or modify
CC   plant materials (particularly recycled waste paper, paper making pulps,
CC   or material containing guar or locust bean gums (thickeners), or to
CC   reduce viscosity of mannan-containing foods or feeds). The mannanases
CC   are also used to process coffee extracts (to inhibit gel formation); in
CC   cleaning compositions (for machine washing of fabrics, as hard-surface
CC   cleaners, for hand or machine dishwashing, also in oral, dental, contact
CC   lens or body-care compositions) where they remove mannan-containing
CC   soils and prevent binding of some soils to cellulosics; and in fabric
CC   softeners. They can also be used in oil well drilling to fracture
CC   subterranean formations.

PT   Monitoring differential expression of several genes in first Bacillus
PT   cell relative to expression of same genes in one or more second
PT   Bacillus cells, by using substrate containing Bacillus genomic
PT   sequenced tag array  -
XX
PS   Claim 11; SEQ ID NO 7468; 200pp; English.
XX
CC   The invention describes a method of monitoring differential expression of
CC   genes in a first Bacillus cell relative to expression of the genes in
CC   other Bacillus cells, comprising hybridising labelled nucleic acid probes
CC   isolated from Bacillus cells to a substrate containing array of Bacillus
CC   genomic sequenced tags (GST), examining the array, and determining
CC   relative gene expression by an observed hybridisation reporter signal of
CC   a spot in the array. The method is useful for measuring the expression of
CC   genes in a first Bacillus cell relative to expression of the same genes
CC   in one or more second Bacillus cells. The method is useful for monitoring
CC   global expression of several genes from a Bacillus cell, discovering new
CC   genes, identifying possible functions of unknown open reading frames and
CC   monitoring gene copy number variation and stability. Monitoring changes
CC   in expression of genes may be used to provide a representation of the way
CC   in which Bacillus cells adapt to changes in culture conditions,
CC   environmental stress or other physiological provocation. Extensive
CC   follow-up characterisation is unnecessary, when one spot on an array
CC   equals one gene or one open reading frame, since sequence information is
CC   available. This sequence represents a genomic sequence tag (GST) used in
CC   the method of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Novel secreted human proteins useful for stimulating blood cell
PT   generation in patients receiving cancer chemotherapy, treating bone
PT   marrow transplantation patients and for healing fractured bones  -
XX
PS   Claim 2; Page 56; 74pp; English.
XX
CC   AAC61879-93 encode secreted human proteins. The secreted proteins are
CC   useful in assays to determine their biological activities. The proteins
CC   can also be used as biomarkers to identify tissues or cell types which
CC   express the proteins. The polynucleotide molecules can be used as
CC   biomarkers for tissues or chromosomes and to elicit immune responses.
CC   The proteins and antibodies are useful in diagnosis and treatment of
CC   diseases associated with altered expression of these proteins. The
CC   proteins are also useful for prevention or treatment of platelet
CC   disorders, stem cell disorders, osteoporosis or osteoarthritis, burns,
CC   incisions, ulcers, periodontal diseases, central and peripheral nervous
CC   system diseases and neuropathies, for healing fractured bones and to
CC   induce cartilage and/or bone growth in cosmetic plastic surgery. The
CC   proteins are also useful for gut protection or regeneration, for the
CC   treatment of lung or liver fibrosis, for stimulating blood cell
CC   generation in patients receiving cancer chemotherapy and for treatment
CC   of bone marrow transplantation patients.

PT   New polynucleotide(s) encoding secreted human proteins - are derived
PT   from, e.g. human foetal brain or foetal kidney cDNA libraries,
PT   potentially useful as, e.g. vaccines or thrombolytic agents
XX
PS   Claim 28; Page 89-90; 120pp; English.
XX
CC   Full-length cDNA clone fg949_3 includes an open reading frame
CC   encoding a human secreted protein (see AAW74726).  It was isolated
CC   from a human adult brain cDNA library using methods which are
CC   selective for cDNAs encoding secreted proteins, or was identified
CC   as encoding a secreted or transmembrane protein on the basis of
CC   computer analysis of the amino acid sequence of the encoded protein.
CC   It shows some similarity to database sequences.  The invention
CC   provides polynucleotides (see AAV62746-55) from human foetal brain,
CC   adult testis, adult brain, adult kidney and foetal kidney (all
CC   deposited as composite clone ATCC 98404), which encode human
CC   secreted proteins (see AAW74720-29).  The polynucleotides and
CC   proteins are predicted to have biological activities which would
CC   make them suitable for treating, preventing or ameliorating medical
CC   conditions in humans and animals, although no supporting data are
CC   given.  Suggested activities include nutritional activity, immune
CC   stimulating (e.g. as vaccines) or suppressing activity,
CC   haematopoiesis regulating activity, tissue growth activity,
CC   activin/inhibin activity, chemotactic/chemokinetic activity,
CC   haemostatic and thrombolytic activity, receptor/ligand activity,
CC   antiinflammatory activity, cadherin/tumour invasion suppressor
CC   activity, and tumour inhibition activity.  The polynucleotides are
CC   also stated to be useful for gene therapy, and can be used in
CC   recombinant production of the polypeptidess.

PT   -
XX
PS   Claim 183; Page 191-192; 284pp; English.
XX
CC   The invention relates to human secreted or transmembrane protein (I),
CC   their fragments and is encoded by specific complementary deoxyribonucleic
CC   acid (cDNA) inserts (II), where the protein is substantially free from
CC   other mammalian proteins. (I) are useful for preventing, treating or
CC   ameliorating a medical condition, especially immunological treatment or
CC   prevention of tumours. (I) exhibits activity relating to angiogenesis,
CC   cytokine, cell proliferation, cell differentiation, antiinflammatory,
CC   stem cell growth factor activity and activin or inhibin-related
CC   activities. (I) can be used to manipulate stem cells in culture to give
CC   rise to neuroepithelial cells that can be used to augment or replace
CC   cells damaged by illness, autoimmune disease, accidental damage or
CC   genetic disorders. (I) induces the proliferation of neural cells and
CC   regeneration of nerve and brain tissue and is useful for the treatment of
CC   central and peripheral nervous system diseases and neuropathies, such as
CC   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC   lateral sclerosis. (I) is involved in chemotactic or chemokinetic
CC   activity, regulation of haematopoiesis and is useful for treating myeloid
CC   or lymphoid cell disorders, platelet disorders such as thrombocytopaenia
CC   and for regeneration of bone, cartilage, tendon, ligament and/or nerve
CC   tissue growth and in tissue repair, healing of burns, incisions, ulcers,
CC   for treating osteoporosis, osteoarthritis, bone degenerative disorders or
CC   periodontal disease. (I) is also useful for gut protection or
CC   regeneration and treatment of lung or liver fibrosis, reperfusion injury
CC   in various tissues, various immune deficiencies and disorders including
CC   severe combined immunodeficiency (SCID), bacterial or fungal infections,
CC   autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis,
CC   diabetes mellitus, myasthenia gravis, allergic reactions and conditions,
CC   such as asthma or other respiratory problems. (II) is useful to express
CC   recombinant protein, as markers for tissues in which the corresponding
CC   protein is preferentially expressed and in gene therapy. The present
CC   sequence is that of a polynucleotide of the invention.

PT   NF-approximatelykB activating gene and expressed protein, applicable in
PT   diagnosis and screening inhibitors or promoters to control excessive
PT   activation or inhibition for treating e.g. inflammations, autoimmune
PT   diseases and cancer  -
XX
PS   Claim 4; Page 107-111; 841pp; Japanese.
```

```
XX
CC   The invention relates to a purified protein (I), comprising one of 90
CC   fully defined sequences (ABP61424-ABP61513) or a protein based on any of
CC   the sequences but with some amino acids deleted, substituted or added and
CC   with a NF-kB (nuclear factor kappa B) activating effect. The protein and
CC   encoding gene (ABQ91912-ABQ92001) are useful in diagnosis and screening
CC   inhibitors or promoters to control excessive activation or inhibition
CC   and for treating e.g. inflammations, autoimmune diseases, cancers,
CC   infections, bone diseases, AIDS, neurodegenerative diseases or ischaemic
CC   disorders.

PT   New proteins with hydrophobic domains, useful for treating autoimmune
PT   diseases, inflammatory diseases, wounds, burns, incisions and ulcers  -
XX
PS   Claim 4; Page 106-110; 126pp; English.
XX
CC   The present sequence is that of cDNA clone HP03342 encoding a
CC   human protein (see AAB20090) having a predicted N-terminal
CC   secretory signal and a transmembrane domain.  The clone was
CC   obtained from a human umbilical cord blood cDNA library.  The
CC   predicted protein shows 35% homology to the Caenorhabditis elegans
CC   hypothetical protein CET06D8.9.  The invention provides human
CC   proteins (see AAB20089-96) having hydrophobic domains indicative
CC   of secretory signals and membrane domains, and nucleic acids (see
CC   AAF30020-27) encoding them.  These are expected to have cell
CC   proliferation, cell differentiation, immunostimulant or
CC   immunosuppressor, haematopoiesis regulating, tissue growth,
CC   activin, inhibin, chemotactic, chemokinetic, haemostatic,
CC   thrombolytic, receptor/ligand, antiinflammatory or antitumour
CC   activities (no evidence provided).  Expression vectors, eukaryotic
CC   host cells and antibodies are also provided.  The human cDNAs of
CC   the invention are used as probes for genetic diagmosis and gene
CC   sources for gene therapy, or are used in the recombinant production
CC   of the proteins.  Cells expressing the secretory or membrane
CC   proteins are utilized for detection of corresponding receptors of
CC   ligands, and in candidate drug screening.

PT   Nucleic acids encoding secretory proteins/membrane proteins, useful in
PT   gene therapy or as candidate target molecules in drug development -
XX
PS   Claim 1; SEQ ID 15; 609pp + CD ROM; English.
XX
CC   This invention relates to nucleic acid sequences AAF93744 - AAF93916
CC   which encode human secretory or membrane proteins represented by
CC   AAB88317 - AAB88419. Included in the invention are primers
CC   AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the
CC   cDNA sequences of the invention. The invention also includes methods for
CC   the production of antibodies directed against the proteins, and cDNA
CC   sequences, which can be used in vaccines. The polynucleotide sequences
CC   can be used in gene therapy. The polynucleotide sequences and the
CC   proteins they encode may be used in the prevention, treatment and
CC   diagnosis of diseases associated with inappropriate secretory
```

```
CC  protein/membrane protein expression. The nucleic acids and complementary
CC  sequences may also be used as DNA probes in diagnostic assays
CC  (e.g. polymerase chain reactions (PCR)) to detect and quantitate the
CC  presence of similar nucleic acid sequences in samples. They may also be
CC  used to study the expression and function of secretory proteins/membrane
CC  polypeptides and their role in metabolism. The polypeptides may be used
CC  as antigens in the production of antibodies against them and in assays to
CC  identify modulators (agonists and antagonists) of expression and
CC  activity. The antibodies and antagonists may also be used as therapeutic
CC  agents to down regulate expression and activity. The antibodies may also
CC  be used as diagnostic agents for detecting the presence of the
CC  polypeptides in samples (e.g. by enzyme linked immunosorbant assay
CC  (ELISA). Examples of diseases which may be treated include rheumatoid
CC  arthritis and diabetes.

PT  Novel secreted and transmembrane polypeptides useful for diagnosing
PT  tumour in a mammal, for identifying agonists and antagonists of the
PT  polypeptide and for therapeutic use
XX
PS  Claim 2; Fig 45; 222pp; English.
XX
CC  The present sequence encodes a secreted or transmembrane polypeptide.
CC  The specification describes polypeptides designated PRO1484, PRO4334,
CC  PRO1122, PRO1889, PRO1890, PRO1887, PRO1785, PRO4353, PRO4357, PRO4405,
CC  PRO4356, PRO4352, PRO4380, PRO4354, PRO4408, PRO5737, PRO4425, PRO5990,
CC  PRO6030, PRO4424, PRO4422, PRO4430 and PRO4499. PRO1889 polypeptide is
CC  useful for diagnosing tumour in a mammal. The polypeptides, their
CC  agonists and antagonists are useful treating a condition associated with
CC  expression or activity of the polypeptide. Conditions treated include
CC  obesity, diabetes or hyper-or hypo-insulinemia. The polypeptides are
CC  capable of inducing proliferation of mammalian kidney mesangial cells
CC  and are therefore useful-for treating kidney disorders associated with
CC  decreased mesangial cell function such as Bergers disease or other
CC  nephropathies associated with Schonlein-Henoch purpura, celiac disease,
CC  dermatitis herpetiformis or Crohns disease. The nucleic acids may be used
CC  to generate transgenic animals for use in development and screening of
CC  therapeutically useful reagents and also for chromosome identification
CC  and tissue typing.

PT Novel nucleic acids encoding PRO polypeptides, used to diagnose the
PT presence of tumours, such as prostate and breast tumours, in mammals and
PT to screen for modulators of the compounds -
XX
PS Claim 2; Fig 503; 774pp; English.
XX
CC Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR
CC primers for PRO polypeptides of the invention. The sequences of the
CC invention can be used to detect the presence of a tumour in a mammal by
CC comparing the level of expression of a PRO polypeptide in a test sample
CC of cells from the animal and a control sample of normal cells, whereby a
CC higher level of expression in the test sample indicates the presence of a
CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep,
CC pigs, goats and rabbits but are preferably human. The polypeptides can be
CC used to stimulate tumour necrosis factor (TNF) alpha release from human
CC blood, when contacted with it. A specific polypeptide can be used to
CC stimulate the proliferation or differentiation of chondrocyte cells. The
CC PRO proteins can be used to determine the presence of tumours and also
CC susceptibility to tumour development, particularly adrenal, lung, colon,
CC breast, prostate, rectal, cervical, or liver tumours, in mammalian
CC subjects. The oligonucleotide probes specific for the PRO nucleic acids
CC can be used for genetic analysis of individuals with genetic disorders.

PT One hundred and eighty seven nucleic acids encoding PRO polypeptides,
PT useful in diagnosis and treatment of cardiovascular (e.g. myocardial
PT infarction), endothelial or angiogenic disorders in a mammal -
XX
PS Claim 1; Fig 325; 567pp; English.
XX
CC The present invention provides the protein and coding sequences of human
CC PRO proteins. These are useful for treating or diagnosing a
CC cardiovascular, endothelial or angiogenic disorder, including cardiac
CC hypertrophy, trauma, cancer, age-related macular degeneration,
CC atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis,
CC angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour
CC angiogenesis (such as breast carcinoma and liver carcinoma) and wound
CC healing. The present sequence is a coding sequence of the invention.

PT New PRO polypeptides and polynucleotides encoding the polypeptides,
PT useful in gene therapy, chromosome identification, tissue typing, or
PT for genetic analysis of individuals with genetic disorders -
XX
PS Claim 2; Figure 45; 218pp; English.
XX
CC This invention relates to the cDNA and protein sequences of novel
CC secreted and transmembrane polypeptides PRO polypeptides. The
CC invention also comprises a method for producing the proteins of the
CC invention by recombinant means and antibodies specific for the protein
CC of the invention. The antibody may be used for detecting the PRO
CC proteins of the invention and may be used to modify their activity.
CC polynucleotides may be used as hybridisation probes for a cDNA library
CC to isolate the full-length PRO cDNA or to isolate other cDNAs, to
CC construct hybridisation probes for mapping the gene which encodes that
CC PRO and for genetic analysis of individuals with genetic disorders, in
CC assays to identify other proteins or molecules involved in binding
CC reaction, to generate transgenic animals or knock-out animals which in
CC turn are useful in the development and screening of therapeutically
CC useful reagents, for chromosome identification, and tissue typing. The
CC PRO polypeptides are useful in gene therapy, and as molecular weight
CC markers for protein electrophoresis purposes. The sequences may
CC also be used to detect overexpression on PRO polypeptides in cancerous
CC tumours and for screening for differentially expressed genes using
CC microarray technology. The present sequence represents a cDNA encoding
CC a human PRO protein of the invention.

PT One hundred and eighty seven nucleic acids encoding PRO polypeptides,
PT useful in diagnosis and treatment of cardiovascular (e.g. myocardial
PT infarction), endothelial or angiogenic disorders in a mammal -
XX
PS Claim 2; Fig 325; 565pp; English.
XX
CC ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
CC ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic,
CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic
CC activities, and can be used in gene therapy. The PRO polynucleotides,
CC proteins, agonists and antagonists are useful for treating or diagnosing
CC a cardiovascular, endothelial or angiogenic disorder in a mammal,
CC e.g. cardiac hypertrophy, trauma, cancer, age-related macular
CC degeneration, atherosclerosis, hypertension, arterial restenosis,
CC rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
CC lymphangitis, tumour angiogenesis (such as breast carcinoma and liver
CC carcinoma) and wound healing. The PRO polynucleotides have applications
CC in molecular biology, including use as hybridisation probes, and in
CC chromosome and gene mapping. ABL88259 to ABL88267 represent primers and
CC probes used in the exemplification of the present invention.

PT  New PRO polypeptides and nucleic acid molecules, useful for diagnosing
PT  or treating diabetes mellitus, cancers, septic shock, inflammatory
PT  bowel disease or asthma, or in gene therapy, chromosome identification
PT  or tissue typing -
XX
PS  Claim 2; Fig 45; 196pp; English.
XX
CC  The present invention relates to the isolation of novel human PRO
CC  polypeptides, and the polynucleotide sequences encoding them. The
CC  PRO polypeptides are secreted and transmembrane proteins. The PRO
CC  polypeptides and polynucleotides are useful in diagnosing or
CC  treating non-insulin dependent diabetes mellitus, cancers, septic
CC  shock, rheumatoid arthritis, graft-versus-host disease, stroke, cardiac
CC  ischaemia, psoriasis, inflammatory bowel disease or asthma. The PRO
CC  polynucleotide sequences may be used as hybridisation probes in
CC  chromosome and gene mapping, or in generating antisense RNA and DNA.
CC  They are also useful in preparing PRO polypeptides, in assays to
CC  identify other proteins or molecules involved in binding reaction, to
CC  generate transgenic animals or knockout animals, which in turn are
CC  useful in the development and screening of therapeutically useful
CC  reagents, for chromosome identification, and tissue typing. The PRO
CC  polypeptides and nucleic acid molecules are also useful in gene
CC  therapy, and as molecular weight markers for protein electrophoresis
CC  purposes. Anti-PRO antibodies may be used in diagnostic assays for
CC  PRO polypeptides, or for the affinity purification of the polypeptides
CC  from recombinant cell culture or natural sources. The present sequence
CC  represents a cDNA encoding a human PRO polypeptide of the invention.

XX
CC  The present invention relates to the isolation of novel human PRO
CC  polypeptides, and the polynucleotide sequences encoding them. The
CC  PRO polypeptides are secreted and transmembrane proteins. The PRO
CC  polypeptides and polynucleotides are useful in diagnosing or
CC  treating various bone and/or cartilage disorders (e.g. sports
CC  injuries, arthritis), various insulin deficient states (e.g. diabetes
```

```
CC   mellitus, hypo-insulinaemia), obesity, hyper-insulinaemia,
CC   haemoglobin-associated disorders (e.g. thalassaemias), kidney disorders
CC   associated with decreased mesangial cell function (e.g. Berger disease),
CC   or other nephropathies associated with Schonlein-Henoch purpura,
CC   celiac disease, dermatitis herpetiformis or Crohn's disease. The PRO
CC   polynucleotide sequences may be used as hybridisation probes in
CC   chromosome and gene mapping, or in generating antisense RNA and DNA.
CC   They are also useful in preparing PRO polypeptides, in assays to
CC   identify other proteins or molecules involved in binding reaction, to
CC   generate transgenic animals or knockout animals, which in turn are
CC   useful in the development and screening of therapeutically useful
CC   reagents, for chromosome identification, and tissue typing. The PRO
CC   polypeptides and nucleic acid molecules are also useful in gene
CC   therapy, and as molecular weight markers for protein electrophoresis
CC   purposes. Anti-PRO antibodies may be used in diagnostic assays for
CC   PRO polypeptides, or for the affinity purification of the polypeptides
CC   from recombinant cell culture or natural sources. The present sequence
CC   represents a cDNA encoding a human PRO polypeptide of the invention.

PT  New secreted and transmembrane PRO polypeptides and nucleic acids,
PT  useful in gene therapy, in chromosome and gene mapping, as chromosome
PT  markers, in tissue typing, and in chromosome identification
XX
PS  Claim 2; Fig 503; 706pp; English.
XX
CC  The invention discloses human nucleic acids encoding secreted and
CC  transmembrane (PRO) polypeptides. Also disclosed is an antibody that
CC  specifically binds to the PRO polypeptide, a method for stimulating the
CC  release of tumour necrosis factor alpha (TNF-alpha) from human blood by
CC  contacting the blood a PRO polypeptide, a method for stimulating the
CC  proliferation or differentiation of chondrocyte cells by contacting the
CC  cells with a PRO polypeptide, a method for detecting the presence of a
CC  tumour in a mammal and an oligonucleotide probe derived from any of the
CC  PRO nucleotide sequences. The nucleotide sequences are useful as probes,
CC  in chromosome and gene mapping, in generating antisense RNA and DNA, in
CC  preparing PRO polypeptides by recombinant techniques and in gene therapy
CC  (e.g. for replacement of defective gene). The PRO polypeptides are useful
CC  as molecular weight markers for protein electrophoresis purposes, for
CC  chromosome identification, as chromosome markers, as therapeutic agents,
CC  for stimulating the release of TNF-alpha from human blood, for
CC  stimulating the proliferation or differentiation of chondrocytes and
CC  detecting the presence of a tumour. The PRO polypeptides and nucleic
CC  acids may also be used diagnostically for tissue typing. The sequences
CC  presented in ACA05700-ACA06004 are the cDNAs encoding the PRO
CC  polypeptides of the invention.

PT   Novel isolated PRO polypeptides e.g., PRO1079, PRO827, PRO791, PRO1131,
PT   PRO1316, PRO1183, PRO1343, PRO1760, PRO1567 or PRO4333, useful for
PT   stimulating release of tumor necrosis factor-alpha from human blood -
XX
PS   Claim 2; Fig 503; 701pp; English.
XX
CC   The invention relates to an isolated PRO polypeptide comprising at least
CC   80% sequence identity to the protein sequences appearing as ABU10510-
CC   ABU10814 (including a version lacking its associated signal peptide, or
CC   an isolated extracellular domain of a PRO polypeptide with or without
CC   its associated signal peptide. Also included are the nucleic acids
CC   encoding the PRO proteins (being secreted and transmembrane proteins)
CC   appearing as ABX16586-ABX16590, PRO expression vectors, host cells,
CC   chimaeric PRO fusion proteins, an anti-PRO antibody and a PRO
CC   derived oligonucleotide sequence. The PRO polypeptides are useful for
CC   stimulating release of tumour necrosis factor-alpha from human blood.
CC   The PRO polypeptide PRO6029 is useful for stimulating proliferation or
CC   differentiation of chondrocyte cells. The PRO polypeptides as specified
CC   in the specification and having differential expression in tumour cells,
CC   are useful for detecting presence of tumour in a mammal (such as adrenal
CC   tumour, lung tumour, colon tumour, breast tumour, prostate tumour, rectal
CC   tumour, cervical tumour or liver tumour. The PRO polypeptide PRO6029 is
CC   useful for treating various bone and/or cartilage disorders such as
CC   arthritis, and sports injuries. The PRO polypeptides are useful for
CC   screening compounds to identify ant/agonists. PRO nucleic acids
CC   are useful as hybridisation probes, in chromosome and gene mapping,
CC   in the generation of anti-sense RNA and DNA, for the preparation of PRO
CC   polypeptides and for generating knock-out animals. The present
CC   sequence encodes a PRO polypeptide.

PT   Isolated nucleic acids encoding a proteins that is differentially
PT   expressed during ischemic heart disease and ischemic cardiomyopathy,
PT   useful for preventing, diagnosing and treating cardiac disease -
XX
PS   Claim 2; Page 51-54; 61pp; English.
XX
CC   The present sequence is the human cDNA encoding a protein designated as
CC.  PGP980.2, that is differentially expressed in ischaemic heart disorders.
CC   PGP980.2 DNA is isolated from human heart cDNA library and is expressed
CC   in heart, brain, placenta, lung, skeletal muscle, kidney and pancreas.
CC   This sequence has cardiant activity. The DNA may be used as probes to
CC   detect and quantify homologous sequences in samples. PGP980.2 sequences
CC   can be used to identify modulators, that can be used for treatment,
CC   diagnosis and prevention of diseases associated with inappropriate
CC   expression and activity of PGP980.2, such as ischaemic heart disease and
CC   ischaemic cardiomyopathy.

PT  Human proteins and DNA encoding sequences useful for preventing,
PT  treating or ameliorating a medical condition in a mammalian subject
PT  e.g. arthritis and cancer -
XX
PS  Claim 1; Page 817; 1963pp; English.
XX
CC  Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC  sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC  invention also relates to vectors and recombinant host cells comprising a
CC  nucleotide of the invention, methods of producing the novel polypeptides,
CC  antibodies against the polypeptides, methods of detecting the nucleotides
CC  or polypeptides in a sample, and methods of identifying compounds which
CC  bind to polypeptides of the invention. Although novel, many of the
CC  polypeptides of the invention have homology to known proteins, thereby
CC  giving an insight into their probable biological activities, and hence
CC  potential therapeutic applications. The polypeptides of the invention may
CC  have various activities, including cytokine, cell proliferation or cell
CC  differentiation activities; stem cell growth factor activity;
CC  haematopoiesis regulatory activity; tissue growth activity;
CC  immunomodulatory activity; activin- or inhibin-related activities;
CC  chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC  thrombolytic activities; receptor or ligand activities; or may be
CC  involved in oncogenesis, cancer cell proliferation or metastasis.
CC  Depending on their biological activities, polypeptides and nucleotides of
CC  the invention are useful for preventing, treating or ameliorating medical
CC  conditions, e.g., by protein or gene therapy. Such conditions include
CC  cancers, haematopoietic disorders (e.g.,myeloid or lymphoid cell
CC  disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC  proliferative retinopathy, atherosclerosis, coronary heart disease,
CC  arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC  vascular growth. Polypeptides involved with tissue regeneration and
CC  repair (or nucleic acids encoding them) may be used to promote wound
CC  healing (e.g., of burns, incisions and ulcers), while those with
CC  immunomodulatory activities may be used in the treatment of viral,
CC  bacterial and fungal infections in addition to immune disorders.
CC  Polypeptides with growth factor activity may be used in cell cultures to
CC  promote cell growth. For example, such polypeptides may be used to
CC  manipulate stem cells in culture to give rise to neuroepithelial cells
CC  that can be used to augment or replace cells damaged by illness,
CC  autoimmune disease or accidental damage. The polypeptides and nucleotides
CC  may also be used in the diagnosis of the above conditions, and in drug
CC  screening techniques. The present sequence represents a cDNA encoding a
CC  novel human polypeptide of the invention.

PT  Nucleic acids encoding polypeptides with cytokine-like activities,
PT  useful in diagnosis and gene therapy -
XX
PS  Claim 1; Page 4514; 6221pp; English.
XX
CC  The invention relates to polynucleotides (AAK51456-AAK53435) and the
CC  encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to
CC  cytokine, cell proliferation or cell differentiation or which may induce
CC  production of other cytokines in other cell populations. The
CC  polynucleotides and polypeptides are useful in gene therapy, vaccines or
CC  peptide therapy. The polypeptides have various cytokine-like activities,
CC  e.g. stem cell growth factor activity, haematopoiesis regulating
CC  activity, tissue growth factor activity, immunomodulatory activity and
CC  activin/inhibin activity and may be useful in the diagnosis and/or
CC  treatment of cancer, leukaemia, nervous system disorders, arthritis and
CC  inflammation.
CC  Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666
CC  (AAM80020) are omitted as the relevant pages from the sequence listing
CC  were missing at the time of publication.

XX
CC   AAH99166 to AAH99904 encode the human proteins given in AAM25225 to
CC   AAM25963. The proteins can have activities based on the tissues and
CC   cells they are expressed in, such as: antiinflammatory; antirheumatic;
CC   antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
CC   central nervous system; virucide; anti-HIV; fungicide; antimutagen;
CC   cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary;
CC   antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic;
CC   antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
CC   antiparkinsonian; and immunostimulant. The proteins and polynucleotides
CC   encoding them can be used in gene therapy, antisense therapy and vaccine
CC   production, The proteins and polynucleotides are useful for screening for
CC   agonists or antagonists of a protein and for the treatment and diagnosis
CC   of disorders associated with the activity of a protein e.g. inflammation;
CC   rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction,
CC   neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal
CC   infections, autoimmunity, genetic diseases, haematopoietic disorders,
CC   anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers,
CC   osteoporosis, severe combined immunodeficiency, eczema, allergic
CC   rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression,

PT   Isolated nucleic acids encoding a proteins that is differentially
PT   expressed during ischemic heart disease and ischemic cardiomyopathy,
PT   useful for preventing, diagnosing and treating cardiac disease -
XX
PS   Claim 2; Page 47-50; 61pp; English.
XX
CC   The present sequence is the human cDNA encoding a protein designated as
CC   PGP980.1, that is differentially expressed in ischaemic heart disorders.
CC   PGP980.1 DNA is isolated from human heart cDNA library and is expressed
CC   in heart, brain, placenta, lung, skeletal muscle, kidney and pancreas.
CC   This sequence has cardiant activity. The DNA may be used as probes to
CC   detect and quantify homologous sequences in samples. PGP980.1 sequences
CC   can be used to identify modulators, that can be used for treatment,
CC   diagnosis and prevention of diseases associated with inappropriate
CC   expression and activity of PGP980.1, such as ischaemic heart disease
CC   and ischaemic cardiomyopathy.

PS   Claim 1; Page 129-130; 188pp; English.
XX
CC   This sequence represents a cDNA of the invention, and is designated
CC   Gene No. 20. This sequence encodes a human secreted protein, and is
CC   expressed ubiquitously, including T-cells and amygdala.
CC   The DNA sequences of the invention and their corresponding secreted
CC   polypeptides are useful for preventing, treating or ameliorating medical
CC   conditions, e.g. by protein or gene therapy. Also pathological conditions
CC   can be diagnosed by determining the amount of the new polypeptides in a
CC   sample or by determining the presence of mutations in the DNA sequences.
CC   Specific uses are described for each of the DNA sequences and the encoded
CC   proteins, based on which tissues they are most highly expressed in, and
CC   include developing products for the diagnosis or treatment of cancer,
CC   tumours, neurological disorders, developmental abnormalities and foetal
CC   deficiencies, blood disorders, leukaemias, diseases of the immune system
CC   (including allergies or asthma), hepatic disease, Alzheimer's and
CC   cognitive disorders, schizophrenia, prostate diseases, autoimmune
CC   disorders and AIDS. The polypeptides are also useful for identifying
CC   their binding partners.

PT Nucleic acids encoding polypeptides with cytokine-like activities,
PT useful in diagnosis and gene therapy -
XX
PS Claim 1; Page 926-928; 6221pp; English.
XX
CC The invention relates to polynucleotides (AAK51456-AAK53435) and the
CC encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to
CC cytokine, cell proliferation or cell differentiation or which may induce
CC production of other cytokines in other cell populations. The
CC polynucleotides and polypeptides are useful in gene therapy, vaccines or
CC peptide therapy. The polypeptides have various cytokine-like activities,
CC e.g. stem cell growth factor activity, haematopoiesis regulating
CC activity, tissue growth factor activity, immunomodulatory activity and
CC activin/inhibin activity and may be useful in the diagnosis and/or
CC treatment of cancer, leukaemia, nervous system disorders, arthritis and
CC inflammation.
CC Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666
CC (AAM80020) are omitted as the relevant pages from the sequence listing
CC were missing at the time of publication.

PT New nucleic acids or oligomers, useful for diagnosing or treating
PT diseases associated with DNA transcription, e.g. immunological
PT disorders, Werner syndrome, psoriasis, myocardial infarction, solid
PT tumours or cancer -
XX
PS Claim 1; SEQ ID No 239; 32pp; English.
XX
CC The invention relates to a nucleic acid, which comprises a segment of the
CC chemically pretreated DNA of genes associated with DNA transcription from
CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC to the chemically pretreated DNA of genes associated with DNA
CC transcription. The set of oligomer probes are useful for detecting the
CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC diagnosing or treating diseases associated with DNA transcription
CC (particularly with the methylation status), e.g. adenosine deaminase
CC deficiency, viral infection, retroviral infection, Sezary syndrome,
CC haematological disorders, immunological disorders, Werner syndrome,
CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC neurological disorders, neurodegenerative disorders, Waardenburg
CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC associated genomic DNA molecules of the invention.

```

PT   New nucleic acid derived from genes associated with DNA repair, useful
PT   for diagnosis, e.g. of ataxia telangiectasia, by determination of
PT   cytosine methylation -
XX
PS   Claim 1; SEQ ID NO 36; 25pp + sequence listing; English.
XX
CC   The invention relates to nucleic acids containing a sequence of at least
CC   18 nucleotides of chemically treated DNA of genes associated with DNA
CC   repair, and their complements. The invention also relates to nucleic
CC   acids comprising at least 18 base pairs of the chemically pretreated DNA
CC   of genes associated with DNA repair selected from PMS2L1, PMS2L12,
CC   PMS2L2, PMS2L3, PMS2, L4, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1, TDG, INPPL1,
CC   RFC4, DDIT1L, FANCB, or XRCC8. Nucleic acids of the invention and related
CC   oligomers, are useful for diagnosis of diseases associated with gene
CC   repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
CC   Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
CC   immunodeficiency, trichthiodystrophy, Fanconi's anaemia, solid tumours
CC   and cancer, particularly by determining status of cytosine methylation
CC   and/or by detecting single-nucleotide polymorphisms. Determination of
CC   individual methylation patterns may allow development of individualised
CC   therapies. The sequences given in records ABL92192-ABL92335 represent
CC   chemically pre-treated DNA fragments from genes associated with DNA
CC   repair, and their complements.
CC   Note: The sequence data for this patent is not represented in the
CC   specification, but is based on sequence information supplied by the
CC   European Patent Office.

XX
PT   New nucleic acid sequences from chemically modified genes associated
PT   with DNA replication, useful for analysing cytosine methylations for
PT   diagnosis and therapy of diseases e.g. Ataxia telangiectasia  -
XX
PS   Claim 1; SEQ ID NO 28; 23pp + Sequence Listing; English.
XX
CC   The invention relates to nucleic acid sequences comprising at least 18
CC   bases of a chemically pretreated gene associated with gene regulation,
CC   selected from 94 genes (ABL49301-ABL49394) and/or complementary sequences
CC   associated with DNA replication, CENPB, DNA2L, ATR, CHD1L, ERCC3, SNRPA1,
CC   RAD50 and LIG2. The chemical pretreatment converts cytosine bases
CC   unmethylated at the 5-position to uracil or another base with
CC   hybridisation behaviour dissimilar to cytosine, to enable analysis of
CC   cytosine methylations. The DNA sequences and method are useful in the
CC   diagnosis of diseases (or predisposition to diseases) associated with DNA
CC   replication and in therapy of such diseases, by enabling analysis of the
CC   cytosine methylation patterns of such genes. They are especially useful
CC   in diagnosis and therapy of e.g. Ataxia telangiectasia, ATR-X, Bloom's
CC   syndrome, solid tumours and cancer.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification and was supposed to be available directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences. However, the sequence data did
CC   not correspond to that referred to in the specification. The present data
```

PT   Fragments of chemically modified genes associated with tumour suppressor
PT   genes and oncogenes, useful in designing primers and probes for
PT   analysing diseases associated with cytosine methylation state e.g.
PT   cancer  -
XX
PS   Claim 1; SEQ ID No 153; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and
CC   oncogenes having a sequence taken from 536 (actually 533 since
CC   numbers 408, 458 and 500 are missing from the sequence listing) sequences
CC   (Ss) and sequences complementary to (Ss). The nucleic acid may be a
CC   peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may
CC   form part of a set of probes for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms and also to be used in an
CC   array for analysing diseases associated with CpG dinucleotides e.g.
CC   cancers and tumours. The probes can also be used in a method for
CC   ascertaining genetic and/or epigenetic parameters for the diagnosis
CC   and/or therapy of existing diseases or the predisposition to specific
CC   diseases, by analysing cytosine methylations. The parameters may be
CC   compared to another set of genetic and/or epigenetic parameters, the
CC   differences serving as basis for diagnosis and/or prognosis events which
CC   are disadvantageous to patients. The present sequence is one of the
CC   533 genomic sequences derived from tumour suppressor genes and
CC   oncogenes.
CC   Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic
CC   format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Novel recombinant entomopox virus vector useful for delivering
PT   polynucleotide encoding protein to vertebrate cell, comprises
PT   polynucleotide encoding protein operably linked with heterologous
PT   promoter sequence  -
XX
PS   Disclosure; Page 226-242; 326pp; English.
XX
CC   The invention relates to a recombinant entomopox virus (EPV) vector,
CC   comprising a polynucleotide encoding a protein operably linked with a
CC   heterologous promoter sequence. The invention also concerns methods for
CC   providing gene therapy for genetic deficiency disorders. Vectors of the
CC   invention are useful for delivering a polynucleotide encoding a protein
CC   to a vertebrate cell preferably a mammalian cell, such as a human cell.
CC   The vector is introduced into the vertebrate cell by infection in a viral
CC   particle, or by transfection, transduction, or injection either in vitro
CC   or in vivo. The vector is useful for the delivery and expression of
CC   biologically useful proteins in gene therapy protocols, and for
CC   delivering large DNA segments for engineering of vertebrate cells.
CC   Polynucleotides of the invention have applications in techniques such as
CC   their use as insertion sites for foreign genes of interest, hybridisation
CC   probes, for chromosome and gene mapping, in PCR technologies, and in the
CC   production of sense or antisense nucleic acids. Vectors of the invention
CC   provide for stable integration and expression of heterologous DNA in host
CC   cells, and are adapted for accepting large heterologous polynucleotide
CC   inserts which can be delivered in an infected or transformed cell and
CC   expressed in a stable fraction. The current sequence represents a
CC   fragment of the genome of the genus B entomopoxvirus from amsacta moorei
CC   (AmEPV).

XX
CC   This sequence is a fragment of the Kaposi's sarcoma-associated
CC   herpesvirus (KSHV) LUR (long unique region). This fragment contains
CC   coding regions for ORF20, OFR21 which encodes thymidine kinase, ORF22
CC   which encodes glycoprotein H, ORF23, ORF24, ORF25 which encodes the
CC   major capsid protein, ORF26 which encodes capsid protein II, ORF27,
CC   ORF28, ORF29b which encodes packaging protein II, ORF30, ORF31, ORF32,
CC   ORF33, ORF29a which encodes packaging protein I, ORF34, ORF35, ORF36
CC   which encodes viral protein kinase, ORF37 which encodes alkaline
CC   exonuclease, ORF38, ORF39 which encodes glycoprotein M, ORF40 which
CC   encodes helicase primase subunit I, ORF41 which encodes helicase primase
CC   subunit II, ORF42, ORF43 which encodes capsid protein III, ORF44 which
CC   encodes helicase primase subunit III, ORF45 which encodes the virion
CC   assembly protein, ORF46 which encodes uracil DNA glycosylase (UDG),
CC   ORF47 which encodes glycoprotein L. KSHV is a new human Herpesvirus
CC   (HHV8) believed to cause Kaposi's sarcoma (KS) which is the most common
CC   form of neoplasm occurring in persons with acquired immune deficiency
CC   syndrome (AIDS). The DHFR protein is useful for vaccination, prophylaxis,
CC   diagnosis and treatment of a subject with Kaposi's sarcoma and for
CC   detecting expression of a DNA virus associated with Kaposi's sarcoma in a
CC   cell.

PS   Example 2; Page 135-203; 230pp; English.
XX
CC   This sequence represents the long unique region and terminal repeat of
CC   the Kaposi's sarcoma-associated herpes virus (KSHV). KSHV is also known
CC   as human herpes virus 8 (HHV8). This sequence contains the DNAs of the
CC   invention which encode KSHV polypeptides selected from: (a) viral
CC   macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6);
CC   (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L;
CC   (d) capsid protein IV encoded by ORF65; and (e) immediate early protein
CC   encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded
CC   by it, and antibodies (Ab) specific for the proteins are useful for
CC   detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body
CC   fluids or tissue samples. HHV8 infections can be treated with antisense
CC   or triplex forming molecules or agents that bind specifically to the
CC   protein. Ab may be used for prophylaxis or treatment of HHV8 infection,
CC   while the protein can be used in protective vaccines. Ab may also be used
CC   to differentiate between lymphomas, and HHV8 may be implicated in many
CC   other lymphoproliferative diseases such as lymphomas, leukaemia,
CC   splenomegaly and mycosis fungoides. Cells and animals containing the
CC   nucleic acid are useful for drug screening. HHV8-derived peptides can be
CC   used as targets for antiviral drugs, e.g. dihydrofolate reductase gene
CC   can be inhibited with methotrexate. These can also be used to determine
CC   the immune status of a patient infected with HIV. HHV8 derived protein
CC   viral MIP III may be used as an anti-inflammatory agent for,
CC   e.g. treating rheumatoid arthritis. This sequence is stated as containing
CC   81 open reading frames.

XX
PT   Genome sequence of Chlamydia pneumoniae
XX
PS   Claim 1; Page 291-611; 1912pp; English.
XX
CC   The present sequence represents the complete genome of Chlamydia
CC   pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes
CC   respiratory disease such as pneumonia and bronchitis and is thought
CC   to be a contributing factor in heart disease, sarcoidosis, sinusitis,
CC   purulent otitis media, erythema nodosum or pharyngitis. The polypeptides
CC   encoded by the open reading frames of the C. pneumoniae genome (see
CC   AAY34584-Y35879) can be used in immunogenic compositions as vaccines.
CC   Vectors containing C. pneumoniae nucleotides sequences can also be
CC   used as immunogenic compositions, especially where the vector directs
CC   the expression of a neutralising epitope of C. pneumoniae.

PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and
PT   analysis, cattle breeding, or for genetically improving cattle
XX
PS   Claim 2; SEQ ID No 5663; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived
CC   from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC   second nucleic acid molecule comprising any of 15112 nucleotide
CC   sequences, appearing as ABX34836-ABX49947, or complements of them.
CC   Also included are; (1) a transformed cell having a nucleic acid
CC   comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC   translated sequence that functions in the cell to cause termination of
CC   transcription and addition of polyadenylated ribonucleotides to a 3' end
CC   of the mRNA molecule; and (2) determining a level or pattern of a
CC   molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC   nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC   complement or fragment) with a complementary nucleic acid molecule
CC   obtained from the bovine cell or tissue, where hybridisation between the
CC   marker nucleic acid and the complementary nucleic acid permits the
CC   detection of the molecule; and (b) detecting the level or pattern of the
CC   complementary nucleic acid, where the detection of the complementary
CC   nucleic acid is predictive of the level or pattern of the molecule.
CC   The LMFD nucleic acid is used for determining a level or pattern
CC   of a molecule in a bovine cell or tissue. It is useful for genome
CC   mapping, gene identification and analysis, cattle breeding, preparation
CC   of constructs for use in cattle gene expression, or for genetically
CC   improving cattle. The present sequence is one of the 15112 bovine
CC   LMFD EST (expressed sequence tag) nucleic acids.
CC   Note: The present sequence was not shown in the specification but
CC   was obtained in electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139.

PT Composition for therapy and diagnosis of ovarian cancer comprising
PT polypeptide of a ovarian tumor polypeptide, polynucleotide encoding
PT polypeptide, antibody specific to polypeptide or T cell expressing
PT polypeptide -
XX
PS Claim 1; SEQ ID 7839; 489pp; English.
XX
CC The present invention describes a composition (I) comprising: carriers
CC and immunostimulants; and a polypeptide (II) of a ovarian tumour
CC polypeptide encoded by a polynucleotide (III) having a cDNA sequence
CC (S1) from the 10912 nucleotide sequences as given in ABL77023 to
CC ABL87934, (III) encoding (II) having a sequence (S2), a T cell
CC population of (II), or antigen presenting cells that express (II).
CC (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to
CC (S1) can be used for detecting ovarian cancer in a patient's biological
CC sample preferably serum or ovarian tissue. The method comprises
CC contacting a biological sample from a patient with (IV), detecting the
CC amount of polynucleotide hybridising to (IV) and comparing the amount to
CC a predetermined cutoff value and thereby detecting ovarian cancer in the
CC patient, where the amount of polynucleotide hybridising to (IV) is
CC detected preferably by polymerase chain reaction (PCR). (I) comprising
CC (III) and/or (II) is useful for stimulating and/or expanding T cells
CC specific for an ovarian tumour protein comprising contacting T cells
CC with (III) or (II). (III) is useful in design and preparation of
CC ribozyme molecules for inhibiting expression of the tumour polypeptides
CC and proteins in tumour cells; and to isolate a full length gene from a
CC suitable library e.g., a tumour cDNA library using well known
CC techniques.

PT Novel purified corn-ear derived polynucleotide useful as hybridization
PT probe for detecting polynucleotide in sample, and for identifying,
PT evaluating, and altering desired characteristics associated with
PT growth, development -
XX
PS Examples; SEQ ID No 4581; 390pp; English.
XX
CC The present invention relates to the isolation of corn ear-derived
CC polynucleotides (cdps) from the corn (Zea mays) cDNA libraries
CC SATMON022 and SATMON023. Some of the cpds uniquely identify structural,
CC functional, and regulatory genes of corn ear. The polynucleotides
CC sequences are useful for detecting cpds in a sample, for producing
CC a corn ear-specific profile of gene transcription, for detecting
CC altered gene expression in inbred or hybrid plants, and for screening
CC several molecules for specific binding to the polynucleotide. The cdps
CC are useful to identify, isolate, or extend identical or related
CC corn-ear nucleic acid sequences from DNA libraries, and in nucleic
CC acid amplification or hybridisation techniques to follow the
CC expression of desirable traits through plant breeding programs.
CC Preferably, the cdps are used to identify, evaluate, alter, or
CC follow the inheritance of desired characteristics associated with
CC growth and development, disease resistance, environmental adaptability,
CC quality, and yield of corn. The cdps are also useful as molecular
CC markers for studying inheritance and multigene traits in a plant
CC breeding program. The cpds are useful for producing purified corn-ear
CC polypeptides by recombinant techniques. They are also useful in
CC diagnostic assays to detect or confirm conditions or diseases
CC associated with abnormal levels of cdp expression. ABX81541-ABX89140
CC represent corn ear-derived polynucleotides (cpds) of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the
CC USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html.

PT   hyperproliferative disorders and autoimmune disorders -
XX
PS   Disclosure; SEQ ID 10411; 1037pp; English.
XX
CC   The present invention describes substantially purified human proteins
CC   (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC   in the specification). ABN15762 to ABN27252 encode the human ORFX
CC   proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC   treating or preventing a pathology associated with an ORFX-associated
CC   disorder in humans, and in the manufacture of a medicament for treating a
CC   syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC   sequences can be used in gene therapy. ORFX sequences can be used in the
CC   treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC   psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC   osteoarthritis, neurodegenerative disorders, disorders related to organ
CC   transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC   lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
CC   storage disease, various immune deficiencies and disorders, infectious
CC   diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
CC   arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC   disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC   useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC   bone degenerative disorders, or periodontal disease, and for gut
CC   protection or regeneration and treatment of lung or liver fibrosis,
CC   reperfusion injury in various tissues and conditions resulting from
CC   systemic cytokine damage.
CC   N.B.  The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and
PT   analysis, cattle breeding, or for genetically improving cattle -
XX
PS   Claim 2; SEQ ID No 5563; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived
CC   from cattle, and the LMFD nucleic acid can specifically hybridise to a
CC   second nucleic acid molecule comprising any of 15112 nucleotide
CC   sequences, appearing as ABX34836-ABX49947, or complements of them.
CC   Also included are; (1) a transformed cell having a nucleic acid
CC   comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC   translated sequence that functions in the cell to cause termination of
CC   transcription and addition of polyadenylated ribonucleotides to a 3' end
CC   of the mRNA molecule; and (2) determining a level or pattern of a
CC   molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC   nucleic acid (comprising any of the 15112 nucleic acid sequences or its
CC   complement or fragment) with a complementary nucleic acid molecule
CC   obtained from the bovine cell or tissue, where hybridisation between the
CC   marker nucleic acid and the complementary nucleic acid permits the
CC   detection of the molecule; and (b) detecting the level or pattern of the
CC   complementary nucleic acid, where the detection of the complementary
CC   nucleic acid is predictive of the level or pattern of the molecule.
CC   The LMFD nucleic acid is used for determining a level or pattern
CC   of a molecule in a bovine cell or tissue. It is useful for genome
CC   mapping, gene identification and analysis, cattle breeding, preparation
CC   of constructs for use in cattle gene expression, or for genetically
CC   improving cattle. The present sequence is one of the 15112 bovine
CC   LMFD EST (expressed sequence tag) nucleic acids.
CC   Note: The present sequence was not shown in the specification but
CC   was obtained in electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139.

PT   New composition comprising GDP-mannose 4,6-dehydratase (GM4,6D)
PT   peptide, for manufacturing complex carbohydrates, or as targets for
PT   screening GM4,6D antagonists for treating e.g. arthritis, or transplant
PT   rejection  -
XX
PS   Disclosure; SEQ ID NO 350; 6pp; English.
XX
CC   The invention relates to a composition comprising a human GDP-mannose
CC   4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying
CC   GM4,6D inhibitors. GM4,6D inhibitors are useful for reducing inflammation
CC   in a mammalian subject and for treating or ameliorating diseases affected
CC   by the level of cellular fucosylation or diseases affected by the
CC   fucosylation of glycoconjugates. These diseases include arthritis,
CC   transplant rejection, asthma, sepsis, reperfusion injury, stroke or
CC   infection. The GM4,6D peptide or a polynucleotide encoding it is also
CC   useful for manufacturing complex carbohydrates and as targets for
CC   screening small molecule antagonists of the activity of the enzyme. The
CC   polynucleotide is useful in developing an assay for defects in the
CC   enzyme, as well as in gene replacement therapy. Sequences
CC   ABX17942-ABX17944 and ABX17947-ABX33716 represent DNA molecules encoding
CC   human GM4,6D peptides of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at seqdata.uspto.gov/sequence.html.

PT   Primer sets for synthesizing polynucleotides, particularly the 5602
PT   full-length cDNAs defined in the specification, and for the detection
PT   and/or diagnosis of the abnormality of the proteins encoded by the
PT   full-length cDNAs -
XX
PS   Claim 3; SEQ ID 7007; 2537pp + CD ROM; English.
XX
CC   The present invention describes primer sets for synthesising 5602
CC   full-length cDNAs defined in the specification. Where a primer set
CC   comprises: (a) an oligo-dT primer and an oligonucleotide complementary
CC   to the complementary strand of a polynucleotide which comprises one of
CC   the 5602 nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in
CC   the specification. The primer sets can be used in antisense therapy and
CC   in gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
CC   AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632
CC   represent oligonucleotides, all of which are used in the exemplification
CC   of the present invention.

PT   Determining the degree of cytosine methylation in genomic DNA, useful
PT   for diagnosis and prognosis, comprises selective hybridization of
PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

PT   full-length cDNAs -
XX
PS   Claim 1; SEQ ID 3582; 2537pp + CD ROM; English.
XX
CC   The present invention describes primer sets for synthesising 5602
CC   full-length cDNAs defined in the specification. Where a primer set
CC   comprises: (a) an oligo-dT primer and an oligonucleotide complementary
CC   to the complementary strand of a polynucleotide which comprises one of
CC   the 5602 nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in
CC   the specification. The primer sets can be used in antisense therapy and
CC   in gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
CC   AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632
CC   represent oligonucleotides, all of which are used in the exemplification
CC   of the present invention.

CC   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
CC   which represent the human ORFX open reading frames 1 to 3161. The ORFX
CC   sequences have activities such as: cytostatic; hepatotropic; vulnerary;
CC   antipsoriatic; antiparkinsonian; nootropic; neuroprotective;
CC   osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
CC   immunostimulant; cardiant; thrombolytic; coagulant; vasotropic;
CC   antidiabetic; hypotensive; dermatological; immunosuppressive;
CC   antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic;
CC   antithyroid; and antianaemic. The sequences can be used for determining
CC   the presence of or predisposition to, or preventing or treating
CC   pathological conditions associated with an ORFX-associated disorder. The
CC   nucleic acids can be used to express ORFX proteins in gene therapy
CC   vectors. The proteins and nucleic acids may be used to treat cancers,
CC   proliferative disorders, neurodegenerative disorders, osteoarthritis,
CC   graft vs host disease, cardiovascular disease, diabetes mellitus,
CC   hypertension, hypothyroidism, cholesterol ester storage, systemic lupus
CC   erythematosus, severe combined immunodeficiency (SCID), AIDS, viral,
CC   bacterial or fungal infection, malaria, autoimmune disorders, asthma,
CC   allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,
CC   nocturnal haemoglobinuria, antiinflammatory disease; to enhance
CC   coagulation; to inhibit thrombosis; and as a contraceptive.

PT   Selecting a domestic animal for having desired genotypic properties
PT   comprises testing the animal for the presence of a parentally imprinted
PT   quantitative trait locus which is related to muscle mass and/or fat
PT   deposition -
XX
PS   Example 3; Fig 6; 107pp; English.
XX
CC   The present invention describes a method (M1) for selecting a domestic
CC   animal for having desired genotypic properties. The method comprises
CC   testing the animal for the presence of a parentally imprinted
CC   quantitative trait locus (QTL). The pig QTL is located at chromosome 2,
CC   mapping at around position 2p1.7. Also described are: (1) an isolated
CC   and/or recombinant nucleic acid (N1) comprising a parentally imprinted
CC   QTL or its functional fragment; (2) an isolated and/or recombinant
CC   nucleic acid (N2) comprising a synthetic parentally imprinted QTL
CC   derived from at least one chromosome or its functional fragment; (3) an
CC   animal such as pig selected for having desired genotypic or potential
CC   phenotypic properties; (4) a transgenic animal comprising N1 or N2; and
CC   (5) sperm or an embryo derived from the animal of (3) or (4). N1 or its
CC   fragment is useful for selecting an animal destined for slaughter or a
CC   breeding animal having desired genotypic or potential phenotypic
CC   properties. The properties are related to muscle mass and/or fat
CC   deposition. The sperm or an embryo are useful in breeding animals
CC   destined for slaughter. AAA65418 to AAA65524 represent contigs 1 to 10
CC   and 19 to 115 which were isolated from porcine BAC-PIGF2-1 which
CC   contains the INS and IGF2 (insulin-like growth factor) genes. These
CC   sequences where used in an example from the present invention for
CC   generating a reference sequence of IGF2 and flanking loci in the pig.

PT   Detecting a lung cancer-associated transcript in a cell from a patient
PT   for treating lung cancer, by contacting a biological sample from the
PT   patient with a polynucleotide that exhibits increased or decreased
PT   expression in lung cancer  -
XX
PS   Claim 22; Page 400-401; 453pp; English.
XX
CC   The invention relates to a method for detecting a lung cancer-associated
CC   transcript in a cell from a patient, comprising contacting a biological
CC   sample from the patient with a polynucleotide that selectively hybridises
CC   to a sequence that is at least 80 % identical to a gene that exhibits
CC   increased or decreased expression in lung cancer samples. Lung
CC   cancer-associated polynucleotides and polypeptides are used for
CC   identifying a compound that modulates a lung cancer-associated
CC   polypeptide, for inhibiting proliferation of a lung cancer-associated
CC   cell to treat lung cancer in a patient and for treating a mammal having
CC   lung cancer by administering a modulatory compound identified. The
CC   methods are useful for treating lung cancer, such as small cell lung
CC   cancer, non-small cell lung cancer or other benign or precancerous
CC   lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive
CC   pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial
CC   pulmonary fibrosis, asthma and bronchiectasis. The genes, polynucleotides
CC   and polypeptides are useful for diagnostic purposes and as targets for
CC   screening for therapeutic compounds that modulate lung cancer, such as
CC   antibodies. Sequences ABX76124-ABX76474 represent lung cancer-associated
CC   polynucleotides of the invention.

PT   Isolation of fibre-specific cotton promoter sequences - using
PT   selected DNA probes to screen genomic DNA fragments, for production
PT   of cotton fibres with improved characteristics
XX
PS   Claim 1; Column 31-34; 46pp; English.
XX
CC   Cotton fibre cell-specific promoter sequences were isolated by
CC   differential screening of a cotton plant cDNA library.  Of 4788 clones
CC   from a 10 day cell library screened with leaf cDNAs, 800 clones not
CC   present in the leaf were isolated. These were screened with cDNAs from
CC   ovule, root and flower mRNAs and resulted in 79 clones isolated.  PCR
CC   analysis was then used to remove cross-hybridising clones.  This
CC   resulted in the isolation of 18 cDNA clones specifically expressed in
CC   cotton fibre cells (AAT30242-4 and AAT30253-67). These cDNAs were then
CC   used to screen for homologous genomic sequences (AAT30245-53 and
CC   AAT30268) in order to obtain the corresp. promoter sequences.
CC   This cDNA clone contains an insert of 1 kb which hybridised with RNAs of
CC   1.1 and 0.9 kb.  This clone is fibre-specific.
CC   The promoters isolated from the fibre cell-specific clones can be used
CC   to generate transgenic cotton plants and lines producing fibres having
CC   altered quantity and quality.

XX
CC   AAT62609-24 are cotton fibre-specific cDNA clones which can be used to
CC   identify genomic clones. This clone, CKFB10-A11, is fibre-specific. (CK
CC   = Coker; FB = Fibre; 10, 15 or 23 = age in days of fibre cells; A1 and
CC   the last character and number stand for clone identity). The
CC   fibre-specific genes were identified by differential cDNA library
CC   screenings. Coding sequences from these isolated genes are used in sense
CC   or antisense orientation to alter the fibre characteristics, e.g.
CC   strength, of transgenic fibre-producing plants.
CC   (Updated on 25-MAR-2003 to correct PF field.)

PT   New transgenic cotton plants containing foreign fibre-specific DNA to
PT   alter fibre characteristics  -
XX
PS   Claim 1; Column 35-36; 32pp; English.
XX
CC   This is the nucleotide sequence of clone CKB10-A11, which represents a
CC   cotton fibre gene. This nucleotide sequence is used in the invention
CC   which relates to the production of new transgenic cotton plants
CC   containing DNA that is fibre specific (i.e. sequences AAZ35544-Z35548)
CC   for producing fibre with altered characteristics. The foreign DNA
CC   express proteins contained in the cotton plants which influence fibre
CC   development, fibre characteristics and cellulose synthesis in cotton to
CC   provide plants and lines with varied cotton fibre characteristics and
CC   quality.

PT   New nucleic acid from human endogenous retrovirus, useful e.g. for
PT   diagnosis of autoimmune disease and complications of pregnancy,
PT   contains at least part of the gag gene  -
XX
PS   Claim 4; Page 36-37; 53pp; French.
XX
CC   The present sequence represents an endogenetic retroviral nucleic acid
CC   fragment, which is associated with an autoimmune disease, and is
CC   integrated into the human genome. The fragment is originally derived
CC   from a multiple sclerosis associated retrovirus (MSRV), which is
CC   homologous to a novel retrovirus, human endogenous retrovirus W (HERV-W).
CC   The fragment comprises (or consists of) at least part of the gag gene of
CC   MSRV. HERV-W retrovirus is associated with autoimmune disease,
CC   failure of pregnancy or disorders of pregnancy. The nucleic acid
CC   fragment, or proteins derived from it, are useful for diagnosis of
CC   autoimmune disease (specifically multiple sclerosis) and for monitoring
CC   pregnancy. The nucleic acid fragments may also be used for in situ
CC   labelling of isolated chromosomes, while the transcription product can be
CC   used to study or monitor T cell proliferation in vitro.

XX
CC   This invention relates to the cDNA sequences encoding an isolated
CC   novel human polypeptide. The protein encoded by the nucleic acid of
CC   the invention is useful for treating central and peripheral nervous
CC   system diseases (e.g. peripheral neuropathy, Huntington's disease,
CC   amyotrophic lateral sclerosis); neurodegenerative diseases (e.g.
CC   Parkinson's disease, Alzheimer's disease); autoimmune disease (e.g.
CC   systemic lupus erythematosus, rheumatoid arthritis, insulin-dependent
CC   diabetes mellitus); myeloid or lymphoid cell disorders (e.g. anaemia
CC   and thrombocytopaenia); wounds, ulcers, burns; bone disorders (e.g.
CC   osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g.
CC   stroke, head trauma); lung or liver fibrosis; reperfusion injury in
CC   various tissues; bacterial, viral or fungal infections; allergic
CC   conditions such as allergic rhinitis, asthma; coagulation disorders
CC   (e.g. haemophilia); cancer and tumours; and inflammatory diseases (e.g.
CC   septic shock, Crohn's disease, anaphylaxis). The protein may be used to
CC   inhibit the growth, infection or function of infectious agents such as
CC   bacteria, fungi, viruses, or to effect bodily characteristics,
CC   biorhythms or circadian cycles of rhythms. The protein may also
CC   have proliferation/differentiation, stem cell growth factor,
CC   haematopoiesis regulation, immune stimulating or suppressing,
CC   chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand,
CC   and antiinflammatory activities. The cDNA sequences of the invention are
CC   useful for expressing recombinant protein for analysis. The present
CC   sequence represents a novel human cDNA sequence of the invention,
CC   this sequence is an expressed sequence tag (EST) and was identified
CC   using subtractive hybridisation.

PS Claim 5; Page 44-46; 65pp; French.
XX
CC The invention relates to polypeptides that constitute the HsdR, HsdM or
CC HsdS subunit of a R/M [restriction/modification] type Ic bacteriophage
CC resistance mechanism active against the phages of lactic acid bacteria,
CC especially Lactococcus lactis. This sequence represents the gene
CC encoding the Lactococcus lactis HsdS subunit. Nucleic acids encoding
CC the HsdR, HsdM or HsdS fragment can be used for expression of at least
CC one bacteriophage resistance mechanism in a lactic acid bacterium.

XX
CC   The sequences given in AAQ32352-69 represent a new family of genes
CC   refered to as melanoma antigens (MAGE).  The cDNAs of this gene
CC   family were identified during the isolation of the antigen E gene.
CC   The MAGE cDNAs, when tested, did not transfer expression of antigen
CC   E, but they did show substantial homology to the antigen E cDNA
CC   sequence.  The MAGE DNAs share a certain degree of homology with each
CC   other and are expressed in tumour cells including several types of
CC   human tumor cells as well as in human tumors.  MAGE expression is not
CC   restricted to melanomas.  MAGE refers to a family of tumor rejection
CC   antigen precursors.  The antigens resulting from these genes are
CC   referred to as MAGE TRAs or melanoma antigen tumor rejection antigens.
CC   See also AAQ32351.

PT   New tumour rejection antigen precursor MAGE3 - useful in
PT   treatment and diagnosis of cancer
XX
PS   Example 33; Page 76; 105pp; English.
XX
CC   AAQ72490 is the genomic DNA which contains the coding sequence for
CC   melanoma antigen-9 (MAGE-9). Another melanoma antigen MAGE-3 is
CC   encoded by AAQ72470, this is a tumour rejection antigen precursor.
CC   Melanomas characterised by the expression of MAGE-3 can be detected,
CC   or monitored, by contacting a test sample with an agent that can
CC   recognise MAGE-3. The melanoma can be treated by the administration
CC   of cytolytic T cells specific for the complex of antigen D (the
CC   mature rejection antigen derived from MAGE-3) and a human leucocyte
CC   antigen (esp. HLA-A1).

PT   Determn. of cancerous condition(s) - using a nucleic acid as a
PT   primer to determine expression of a MAGE tumour rejection antigen
PT   precursor
XX
PS   Example 33; Page 82-83; 121pp; English.
XX
CC   A family of human tumour rejection antigen precursor, MAGE, genes
CC   (AAT05091-99, AAT01165-71) was isolated from various tumour cell lines.
CC   The MAGE 7, 8, 9, 10 and 11 genes (AAT01167-71) were obtd. from
CC   cosmid libraries from PHA-activated lymphocytes of melanoma
CC   patient MZ2.  MAGE serve as markers for tumour diagnosis.  The
CC   genes are silent in normal cells.
CC   (Updated on 25-MAR-2003 to correct PI field.)

PT   New tumour rejection antigen is useful as a vaccine against
```

PT cancerous diseases
XX
PS Disclosure; Column 75-76; 58pp; English.
XX
CC This sequence represents the MAGE-9 gene sequence.
CC The invention relates to a tumour rejection antigen sequence that is
CC useful as a tumour rejection antigen for vaccination against cancerous
CC conditions.

PS   Claim 14; Page 36-37; 72pp; English.
XX
CC   AAA64205-07 and AAA64217 represent the promoters of Zebrafish
CC   cytokeratin gene, muscle creatine kinase gene, fast skeletal muscle
CC   isoform of the myosin light chain 2 gene, and acidic ribosomal protein
CC   gene, repectively. The promoters of these genes are muscle- and
CC   skin-specific. They are capable of directing a structural gene to be
CC   predominantly expressed in skin epithelia when it is inserted in front of
CC   the structural gene and introduced into fish embryos. The promoters can
CC   be used in recombinant DNA molecules, or chimeric genes and the chimeric
CC   genes can be used to create transgenic fish or in a vector used to
CC   transform a cell. The transgenic fish can be used in methods for
CC   detecting steroid hormones, or heavy metals such as zinc, copper,
CC   cadmium and mercury, in a water sample (i.e. in environmental monitoring
CC   and for monitoring pollution). The transgenic fish may also be used as
CC   ornamental fish.
